CATALOG NUMBER 949

1949 The Radford Company

THE RADFORD COMPANY

DULUTH, MINN. - - - - OSHKOSH, WIS.

IMPORTANT

Prices in this book apply only to sizes and description listed; others must be made to order and will be billed accordingly. Ask for prices on special goods. When we find it advisable to make changes in designs and specifications, we reserve the right to make these changes without notice and without obligation to supply such items as they are herein illustrated and described.

RETURNED GOODS

Stock goods will be accepted only when returned within 60 days from date of shipment, in good condition, and providing return has been authorized by us in writing.

Credit will be allowed on same basis as charged less 10% to cover cost of extra handling and less return freight and package charges.

Odd millwork or stock items on which shop work has been done CANNOT be returned for credit. Please do not ask to return them.

GUARANTEE

All Radford-Morgan-Andersen woodwork comes to you with a guarantee of high quality, based on good material and workmanship. It must give the service for which it is intended providing a reasonable degree of co-operation is given by the dealer, contractor and consumer.

Unfinished woodwork of any kind should not be kept in damp storage whether it be a warehouse or a freshly plastered building. On the other hand, new millwork should not be subjected to abnormal heat. Finishing must be done properly and promptly and the top and bottom edges of doors MUST be well painted or varnished. Our responsibility ceases when any of these precautions are not heeded. Doors, being made of wood, and subject to varying atmospheric moisture conditions, naturally cannot be guaranteed against a slight spring or warp.

We will replace or repair (at our option) without charge, material which is defective within the meaning of this guarantee, but we do not agree to pay charges for finishing or installing replaced woodwork. Material can be replaced or repaired only with our consent.

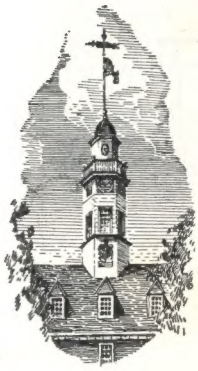
RADFORD-MORGAN-ANDERSEN

WOODWORK

70th Year

FINE AUTHENTIC REPRODUCTIONS, ADAPTATIONS and STANDARD DESIGNS . . . . . .

A COMPLETE LINE of WOODWORK FOR ALL TYPES OF BUILDINGS . . . . . .



This catalog provides up-to-date information concerning woodwork for all general uses —for large homes as well as small dwellings—for farm buildings, office buildings, shops, industrial buildings—for all types of remodeling and repair work.

This year The Radford Company celebrates its seventieth birthday. During these many years the name Radford has been synonymous with service in the distribution of woodwork and building materials and synonymous with quality in the manufacture of millwork.

In these pages we are introducing many new items of woodwork, expertly designed and manufactured with that extra quality and fine workmanship for which the name Morgan has been well known for over ninety years. The line of Morgan Woodwork has always had a well-rounded completeness so that the use of Morgan Woodwork throughout the building will go far toward producing a well-integrated architectural effect. The designs speak for themselves. Many are reproductions of fine authentic originals. Each one was carefully studied by design experts before it found its way into this book.

The best in window units are always identified with Andersen. And window units today play a greater part than ever before in the handsome appearance of a home, the beauty of interiors, and the comfort of living.

Well designed woodwork of first-class quality plays an important part in making any home attractive. The user of Radford-Morgan-Andersen Woodwork can be sure that his woodwork designs are in the best of taste and such designs have an architectural effect which serves to dress up the whole building in which it is used.

Entrance Frame M-3—Door M-102

A Replica of an Eighteenth Century Entranceway Adapted to the Smaller Types of Colonial Home

A correct reproduction of an original discovered a few years ago in a small, quaint seventeenth century home in Albany, New York. This simple, graceful Broken Pediment design is admirably suited to the smaller types of Colonial where greater width is not desired. Pilasters of M-3 Entrance are convex and reeded through the center as shown.

M-3 ENTRANCE FRAME, PINE with OAK SILL includes: Rabbeted Jambs and Outside trim complete. Trim put together, Jambs (K-D) and Sill shipped separately. Chemically Treated.

DOOR SIZE	ROUGH OPENING	WIDTH OF BREAST	OVERALL OUTSIDE	2x4 STUD (5 1/4" WALL)	BR. VEN. (10 1/8" WALL)
3-0 x 6-8, 1 3/4"	3-3 1/4 x 6-11 1/2	4-4 1/2	5-1 x 9- 6 1/4	$90.13★	$99.20★

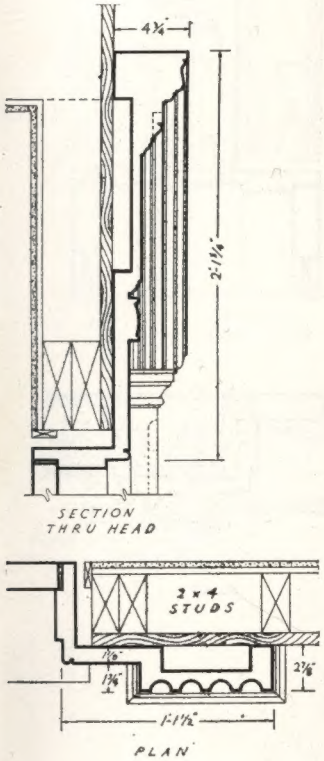
OUTSIDE TRIM ONLY. No Jambs or Sill..... 73.36★

Wall sizes shown for entrance frames are from outside of sheathing to finish plaster for 2 x 4 stud construction; and from face of brick to finish plaster for brick veneer.

M-102 DOOR, No. 1 PINE. Heavy 3/4" Solid Hip Raised Panels 2-S. Ovolo Sticking. 3-0 x 6-8, 1 3/4" $28.27★

Items ★ Carried in Stock

DESIGNS OF DOORS OTHER THAN ILLUSTRATED MAY BE USED IN ALL ENTRANCES.



Entrance Frame M-7—Door M-104

The LITCHFIELD ENTRANCE

An Authentic Reproduction

Incomparable!—A beautiful Doorway discovered in an eighteenth century Litchfield, Connecticut, home several years ago by Morgan designers. An exact reproduction of the fine old original. Its exquisite detail speaks for itself.

M-7 ENTRANCE FRAME, PINE with OAK SILL includes: Rabbeted Jambs and Outside trim complete. Trim put together. Jambs (K-D) and Sill shipped separately. Chemically treated.

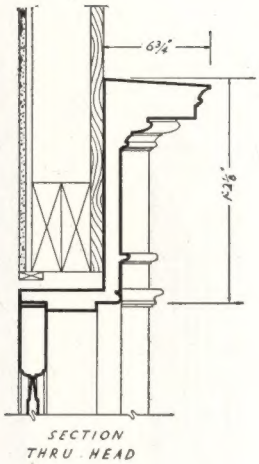
DOOR SIZE	ROUGH OPENING	WIDTH OF BREAST	OVERALL OUTSIDE	2x4 STUD (5¼" WALL)	BR. VEN. (10⅛" WALL)
3-0 x 6-8, 1¾"	3-3¼ x 6-11½	5-3	5-8⅞ x 9-4⅛	$122.21★	$133.27★

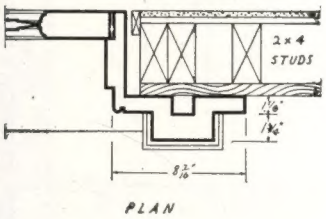
OUTSIDE TRIM ONLY. No Jambs or Sill..... 105.06★

M-104 DOOR, No. 1 PINE. Heavy 1¾" Hip Raised Panels 2S. Ovolo Sticking. Wood Beads for Glass.
3-0 x 6-8, 1¾" Glazed Plain Glass Bedded in Putty $55.58★

Items ★ Carried in Stock

DESIGNS OF DOORS OTHER THAN ILLUSTRATED MAY BE USED IN ALL ENTRANCES.





Entrance Frame M-9—Door M-108

The PROVINCETOWN DOORWAY

An Adaptation from Cape Cod

A simple but very well designed Doorway of Cape Cod origin.

M-9 ENTRANCE FRAME, PINE with OAK SILL includes: Rabbeted Jambs and Outside trim complete. Trim put together. Jambs (K-D) and Sill shipped separately. Chemically treated.

DOOR SIZE	ROUGH OPENING	WIDTH OF BREAST	OVERALL OUTSIDE	2x4 STUD (5¼" WALL)	BR. VEN. (10⅛" WALL)

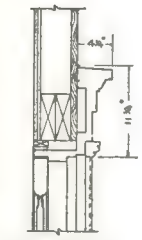
STANDARD ENTRANCE FRAMES

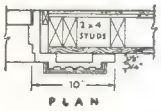


SECTION THRU HEAD M-4575 A

An entirely new line of Entrance Frames, known as Series M-4575, in five designs, is shown on this and the next two pages. Here is a group of Entrances which were designed with one thought in mind, namely, to provide the builder with a collection of pleasing doorways for use on today's small homes.

M-4575A ENTRANCE FRAME includes: Pine outside trim packed in two cartons, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Rot-proofed.

DOOR not included, but priced in the door section.



PLAN

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

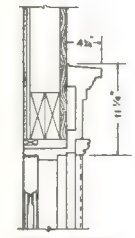
Entrance Frame M-4575B—Door M-108

IDEAL FOR A GROUP HOUSING PROJECT

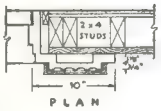


SECTION THRU HEAD M-4575 B

The developer who builds a number of small houses is often obliged to use the same frame for each house, to the detriment of the appearance of the whole project. However, with this new line of Entrance Frames, he now has a chance to give variety in appearance, stepping up the tone of the development, and still keep his costs down.

M-4575B ENTRANCE FRAME includes: Pine outside trim packed in two cartons, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Rot-proofed.

DOOR not included, but priced in the door section.



PLAN

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

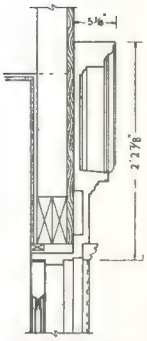
STANDARD ENTRANCE FRAMES

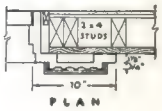


SECTION THRU HEAD M-4575 C

The housing expert who styled these Entrances was instructed to retain the best characteristics of Colonial design, scaled down in general layout so as to be in good relative proportion when installed in a small home, and above all, detail them so that they could be produced economically. By manufacturing the basic parts in quantities, Entrances made of high quality material and by experienced precision workmen, are offered at extremely low prices.

M-4575C ENTRANCE FRAME includes: Pine outside trim packed in two cartons, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Rot-proofed.

DOOR not included, but priced in the door section.



PLAN

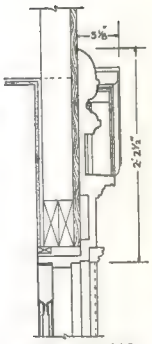
Entrance Frame M-4575C—Door M-100

STYLED FOR EVERY TYPE OF COLONIAL DWELLING



SECTION THRU HEAD M-4575 D

Whether your house be of the low-eaved Cape Cod, steeper-roofed Cottage, gambrel-roofed Dutch Colonial or overhanging Garrison type, one of these Entrance Frames will fit into these low side elevations. There are designs here, too, for the houses with higher side walls, such as the American and New England Colonial, or the forward-facing gable end type. Choose an Entrance that belongs to your type of house.

M-4575D ENTRANCE FRAME includes: Pine outside trim packed in two cartons, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Rot-proofed.

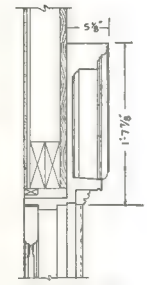
Entrance Frame M-4575D—Door M-107

Entrance Frame M-4575E—Door M-113

STANDARD ENTRANCE FRAMES

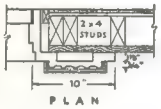
Speaking in millwork terms, here is what you get when you buy an M-4575 Series Entrance Frame: A built-up head with back casing loose, a pair of fluted pilasters with moulded caps and heavy moulded base blocks all planted on the back casings, an apron and Oak sill loose, and a set of jambs rabbeted inside for a 1¾" thick door and outside for a 1⅛" screen or combination door. But, remember, you are not buying just so many pieces of wood, you are getting outstanding value, excellent design and superior workmanship.



SECTION THRU HEAD M-4575 E

M-4575E ENTRANCE FRAME includes: Pine outside trim packed in two cartons, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Rot-proofed.

DOOR not included, but priced in the door section.



PLAN

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

DOOR SIZES	ROUGH OPENING	OVERALL OUTSIDE	STUD WALL	BRICK VENEER

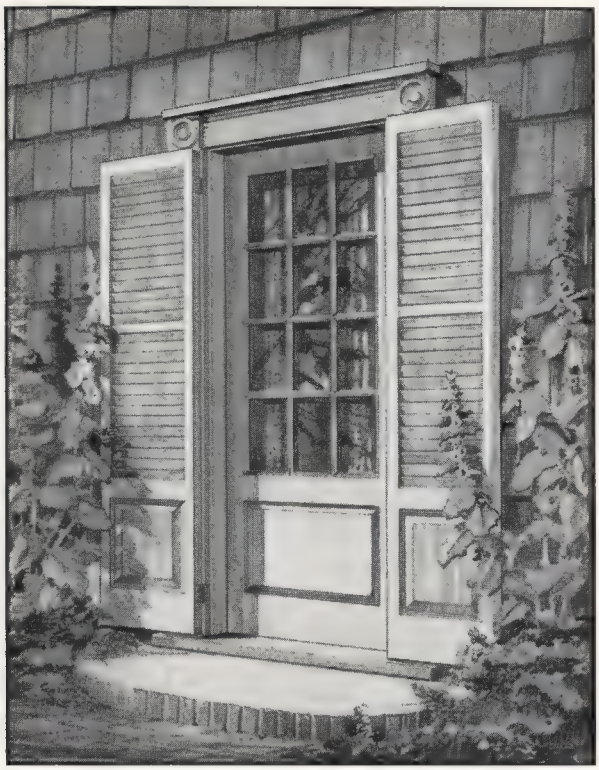
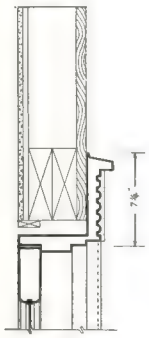
OUTSIDE TRIM ONLY (K-D). No Jambs or Sill.....				52.52★



Entrance Frame M-30—Door M-114—Door Blinds M-510

COLONIAL ENTRANCE FRAME WITH DOOR BLINDS

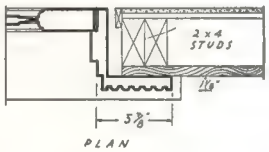
Although of an entirely different type, M-30 Entrance is low in cost, and makes an attractive appearance on a Colonial home. Note the reeded, not fluted, casings and the heavy turned corner blocks. The feature of this entrance, that sets it off to advantage, is the pair of well-designed, strongly-built door blinds. It is recommended that the blinds be hung permanently open, so that a screen or combination door can be used.



SECTION THRU HEAD

M-30 ENTRANCE FRAME includes: Pine outside trim reeded casings 1⅛" x 5½", turned corner blocks 1⅜" thick, and drip cap, all K.D., in one carton. Rabbeted jambs and Oak Sill, K.D., in one carton, all completely machined, rot-proofed.

DOOR and door blinds not included, but priced in another section.



PLAN

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

DOOR SIZES	ROUGH OPENING	OVERALL OUTSIDE	STUD WALL	BRICK VENEER

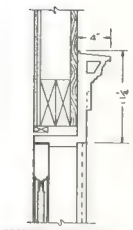
STANDARD ENTRANCE FRAMES

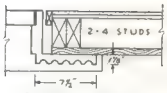


SECTION THRU HEAD M-4576-A

Here are two more designs of inexpensive Entrance Frames that display simple classical lines, employing a combination of dignified heads and full length, wide, fluted casings. When you want an Entrance that is in good taste, at an extremely low price, use either one shown on this page. In general appearance, they compare favorably with other Entrances of higher price, and they certainly do help to dress up the exterior of a modest house.

M-4576A ENTRANCE FRAME includes: Pine outside trim packed in one carton, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Trim furnished in 3-0 x 7-0 size only, can be cut to 6-8 high on the job. Jambs are furnished in both sizes. Rot-proofed.

DOOR not included, but priced in the door section.



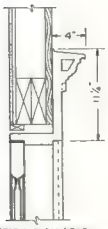
PLAN M-4576 A & B

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

DOOR SIZES	ROUGH OPENING	OVERALL OUTSIDE	STUD WALL	BRICK VENEER
3-0 x 6-8, 1¾"	3-4 x 7-0	4-9 x 7-10	$38.77★	$50.18★
3-0 x 7-0, 1¾"	3-4 x 7-4	4-9 x 8- 2	38.77★	50.18★
OUTSIDE TRIM ONLY (K-D). No Jambs or Sill				22.37★

Entrance Frame M-4576A—Door M-114

A SUGGESTION FOR REMODELING

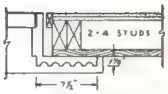


SECTION THRU HEAD M-4576-B

It is possible to install these Entrances in place of ordinary plain-casing door frames. In most cases, the opening size is the same, and, as these Entrances have wide side and head casings, it is only necessary to cut back the siding or shingles. For a very small outlay in money, a great change in appearance can be made, and the house is really enhanced in value.

M-4576B ENTRANCE FRAME includes: Pine outside trim packed in one carton, Pine rabbeted Jambs and Oak Sill separate, completely machined for quick assembly. Trim furnished in 3-0 x 7-0 size only, can be cut to 6-8 high on the job, Jambs are furnished in both sizes. Rot-proofed.

DOOR not included, but priced in the door section.



PLAN M-4576 A & B

Stud construction jambs are carried in stock for 5¼" wall. Brick veneer jambs for 10⅛" wall.

DOOR SIZES	ROUGH OPENING	OVERALL OUTSIDE	STUD WALL	BRICK VENEER
3-0 x 6-8, 1¾"	3-4 x 7-0	4-9 x 7-10	$38.77★	$50.18★

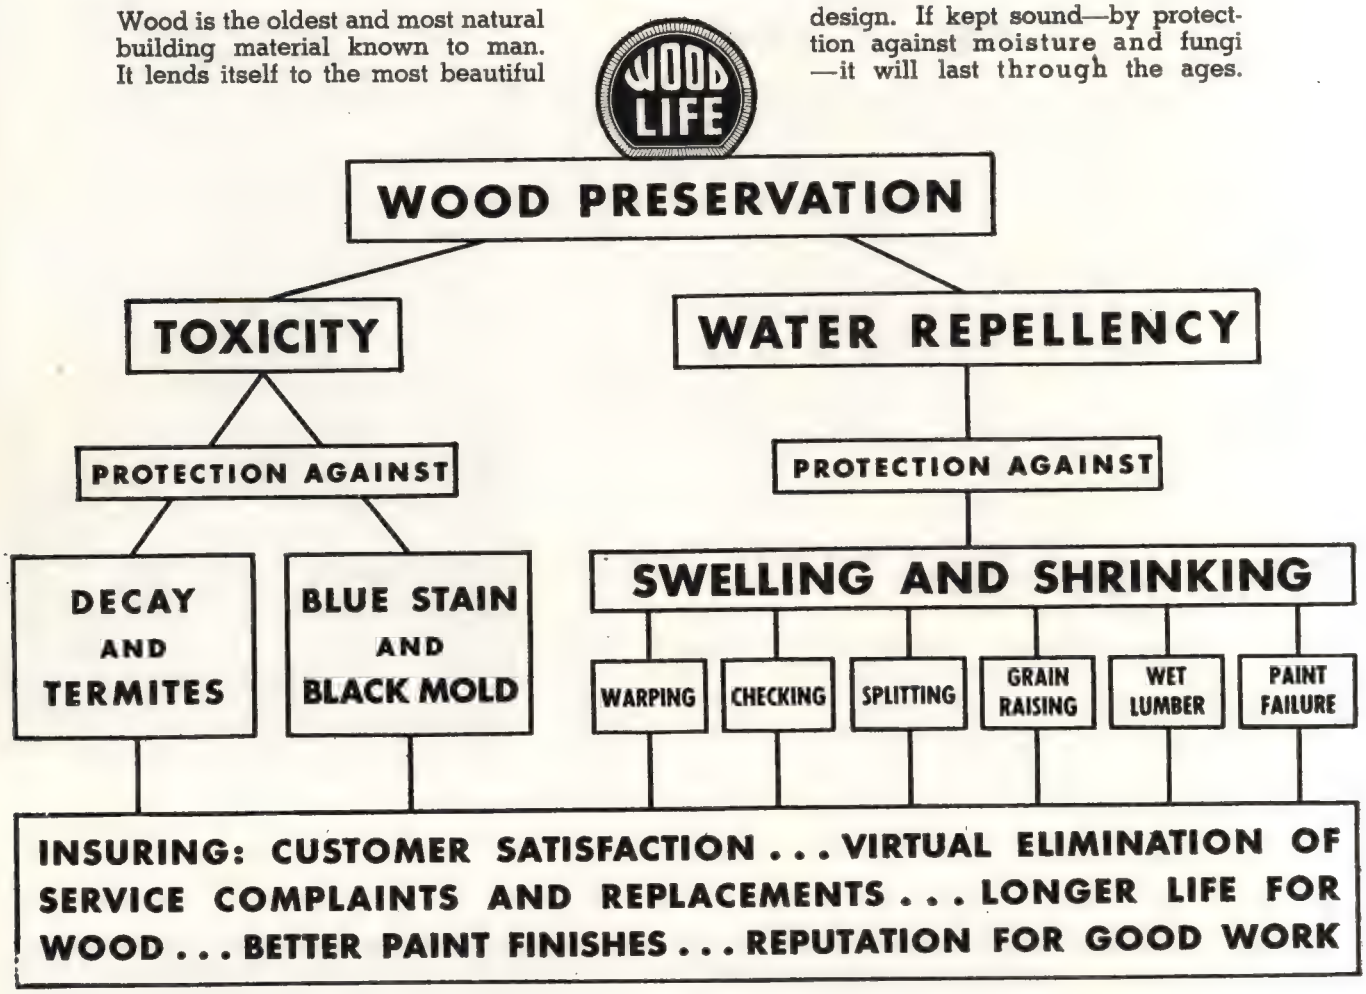
Entrance Frame M-4576B—Door M-101

Wood is the oldest and most natural building material known to man. It lends itself to the most beautiful design. If kept sound—by protection against moisture and fungi—it will last through the ages.



The chart above tells the story—first, how "WOODLIFE" preserves wood against conditions; second, how the benefits of wood preservation are real insurance for the dealer and builder; third, how consumer satisfaction more than justifies the small additional expense for treating.

For 3-minute submersion treatment in "WOODLIFE" water repellent and toxic, the extra charges are:

Window Frames	$0.30 each
Door Frames	.45 each
*House Doors	.60 each
*Combination Doors	.75 each

*These extras do not apply to stock Pine Exterior or Combination Doors, which are specified in this catalog as "Woodlife" treated.

"WOODLIFE" treatment is colorless, is the equivalent of a priming coat, and is an aid to any type of finish. After fitting or trimming, a brush coat should be applied over the new surface.

"WOODLIFE" water repellent and toxic for use on the job, is sold in the following containers:

One quart cans	at	$1.32 per quart
Case of 12 one-quart cans	at	1.19 per quart
One gallon cans	at	3.48 per gallon
Case of 6 one-gallon cans	at	3.15 per gallon
Five gallon cans	at	2.95 per gallon

A GOOD DOOR DESERVES GOOD TREATMENT

No matter how well a door is made, it can be ruined by improper installation. In this case, the manufacturer is at a disadvantage because he has no control over the way the door is installed. Abuse of the door is apt to lead to trouble which, too often, is blamed on defective manufacture.

By observing a few simple precautions, you can make sure your Radford-Morgan door will give a lifetime of service and satisfaction.

It is the tendency of wood to absorb and to lose moisture with changes in moisture content of the surrounding air. There is no known way to stop it. The process can be slowed down, it can be partially controlled—but it cannot be prevented. When a piece of wood takes on moisture, it swells. When it loses moisture, it shrinks. In either case, if the rate of change is not the same throughout the piece, it is likely to warp. Rapidity of change in moisture content augments the tendency toward warpage.

In protecting a door (and other woodwork as well), the first essential is to prevent too rapid absorption of moisture. It is not fair to the door to put in a freshly plastered building. Building should be dried out after plastering before doors are installed. If building is not heated in the summer time then the windows should be left open for free circulation of air until building is reasonably dry.

Doors should not be stored in basement or other damp places.

Doors should be primed immediately after being fitted, while they are still dry. Radford-Morgan doors are manufactured with 6 to 7% moisture content. If delivered to a job while plaster is still drying, they may absorb up to 15% or even 20% under extreme conditions. If they are fitted and painted while moisture content is heavy, then later when house is heated, they are likely to dry out to a 10% or 11% moisture content and shrinkage is bound to occur. Panels shrink causing a line of bare wood to appear around panels. This condition can be corrected fairly well by painting exposed wood with striping brush. However, it can be avoided almost entirely by keeping doors away from too much moisture and by painting them at least with prime coat before they have a chance to swell.

The paint job plays an important part in protecting the door. Paint does not prevent moisture absorption but a good paint does slow it up to such a marked extent that it is an invaluable protection. Poor paint on the other hand, is worse than none; since it may even promote the growth of mildew or fungus.

Top and bottom edges of doors should have at least 2 coats of paint or varnish after being fitted. End grain of wood takes in moisture much faster than side grain. Therefore, ends of stiles need this protection especially. Neglect of this one point is responsible for more door trouble than all other abuses combined. **Our guarantee is not good if top and bottom edges of doors are not painted or varnished after fitting.** Shellac should be avoided for exterior doors.

To swing freely door must be hung on vertical line. Jambs must be plumb, otherwise door may become hinge bound, setting up strain on jamb and sometimes causing warpage of door. Use 3 hinges for exterior doors. In fitting outside door jambs where no sills are used, be sure to allow for threshold. Otherwise, jambs may be cut too short, requiring a considerable cut off the bottom rail of door. This may not only spoil the appearance of the door but may damage it structurally.

A cut-out for mortise lock weakens the door stile to some extent. A rim lock on the face of the door is, therefore, preferable provided it fits in with the design of the house. Other types of locks requiring only two holes bored through the stile can be used without affecting the strength of the door.

A mortise lock is all right, too, if certain simple precautions are observed. The mortise should not be cut too large and should be properly located. Naturally, the smaller the lock, the less wood is cut away. If an extra-large lock must be used, the mortising should be carefully done to avoid cutting away too much wood. Furthermore, lock should not be located in center of lock-rail, but should be placed two or three inches up or down from center of lock-rail to avoid unnecessary weakening of joint between stile and lock-rail due to cutting the dowels away.

*Mirror is attached to stiles and rails of M-4127 doors in 2'-4" widths and under; to insert in 2'-6" widths and over.
**Mirror size for R-2342 and R-2343, 2-8 x 6-8, is 22" x 64".
Be sure to specify whether plain or beveled mirror is required.
ALL MIRROR DOORS ARE MADE UP SPECIAL AND CANNOT BE RETURNED FOR CREDIT

HOLLOW-CORE FLUSH DOORS

R-2342
"New Londoner"
R-2343
"Plyoneer"

R-2342

Is the "New Londoner" for natural finish or paint. The "New Londoner" (a 7 ply door) has long been outstanding among hollow-core doors.

R-2343

Is the "Plyoneer"—a new grade of hollow-core door for paint only. Made of either birch or maple (factory option). Its construction is the same as the "New Londoner."

All Made with Softwood Edge Strips.

"New Londoner" Doors are individually PAPER WRAPPED so each door reaches the job clean and dry, ready for finishing without extra work. "Plyoneer" Doors are not paper wrapped.

All doors can be cut down 2" in height—1" from each end.

For cutting 2" or less in height at our factory—without new edge strip—add per door.....$1.20

For intermediate sizes manufactured at New London factory, add 10% to next larger listed size.

For intermediate sizes which must be cut down in our factory with new edge strip inserted, price is based on time and is substantially more than above.

The Step by Step Route to Hollow-Core Door Perfection
As Found Only in "New Londoner" and "Plyoneer" Doors

The frame consists of pine rails 2¾ inches and stiles 1¼ inches. Stiles and rails are slotted so the grid becomes part of the frame.

The core consists of interlocking pine strips. These strips are so milled that air may pass freely from one section to another during the seasoning process. When interlocked, the grid forms a 3 inch mesh.

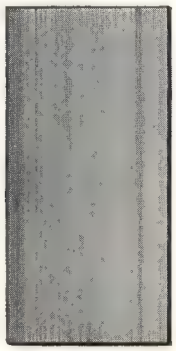
The faces (three-ply panels) are securely bonded to the frame and core, making a perfectly formed door with maximum strength and minimum weight.

The part of the door customers never see is shown in the cutaway view above. The careful seasoning process—air circulating through the core—properly balances the moisture content of the door and it is sealed at each end with dowels.

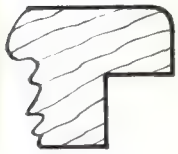
FLUSH CUPBOARD DOORS

¾" Thick—Not Lipped
Unselected Birch Faces. Pine Edge Strips.

2 in. stiles and rails all around. Door can be cut down 1 in. each in width and height leaving sufficient wood for hardware, lipping and rabbeting. When cutting down, an equal amount must be taken from each of the four edges.



R-2357



Lip "A"

LIPPING CUPBOARD DOORS

For lip "A", add per door.....$0.60

Note: In ordering lipped doors, give extreme outside measurement of door. To allow for lipping add ¼ in. all around to the *opening size in cupboard front.* For instance a cupboard front opening 1-11½ x 4-1½ requires a lipped door 2-0 x 4-2, which is stock.

RABBETING, in pairs, add per pair..... $0.60

CUTTING DOWN and setting in edge strip, add per door ..... .90

- Locks at both Jambs
- Steel side weatherstrips
- Doors toxic treated

No. 807
2 Lights Glazed SS and 16 Flat Panels

8-0 x 6-6, 1 3/8"	$66.60★
8-0 x 7-0, 1 3/8"	66.60★

Two sections of doors are securely joined together with sturdy angle irons.

THE "UNI-ROL" was designed, engineered, manufactured and introduced to satisfy a definite demand for a modern low-priced, overhead-type garage door. The usual high standard of construction has been retained; yet, the "UNI-ROL" is well within the popular price range. "UNI-ROL's" simplicity, sturdy construction and quiet, smooth action are a revelation in garage door operation.

Door prefitted to 7'11 1/4" x 6'5" and 6'11"; minimum spaces required over the door opening size, headroom 1 5/8", at each side 2 1/2".

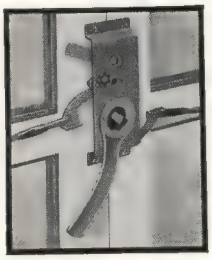
Weatherstrip and roller brackets applied with bolts and screws.

THE HARDWARE, especially designed for the "UNI-ROL" garage door, is made of japanned finish wrought steel. The roller brackets are constructed with BALL BEARING rollers for long life and quiet operation. A two-piece steel weatherstrip, notched with projecting lugs for proper spacing, is furnished for each side of the opening. Holes drilled in the weatherstrip locate the position of the operating hardware.

Items ★ Carried in Stock

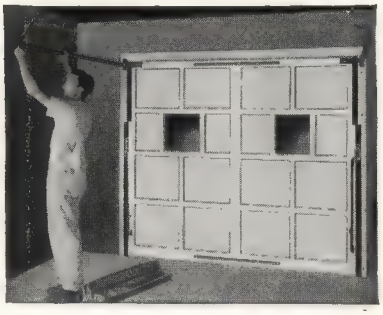
Metal door plate weatherstrip is applied to jambs.

LOCKING DEVICE

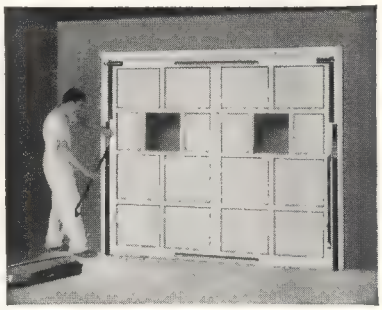


Interior

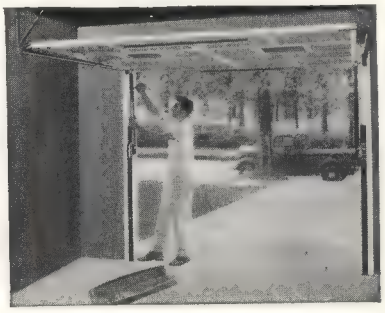
Exterior



Tracks are supported at rear with pre-drilled metal straps.



Self-locating operating hardware is applied to the jambs.



Perfect balance obtained by simply adjusting spring tension.

RO-WAY OVERHEAD TYPE GARAGE DOORS

ALL THESE ADVANTAGES ARE YOURS WITH A RO-WAY GARAGE DOOR

1. **Saves floor and side wall space.**
2. **No snow to shovel—cannot freeze shut.**
3. **Easy to close, even if floor is raised by frost.**
4. **Wind can't blow or "bang" door shut.**
5. **Always protected from rain and sun when opened.**
6. **Operation unaffected by moisture-swollen jambs or sections.**

RO-WAY DOORS ARE GOOD LOOKING

The "good looks" of any Ro-Way Door starts with its design to blend with the type of architecture with which it is to be used. Ro-Way Doors are quality products and look the part. The careful engineering used and exclusive features found only in these Doors give added years of trouble-free service and make their good looks last longer.

QUIET, FULL BALL BEARING ACTION—All track rollers have ball bearings. Flexible, preformed cables operate over ball bearing sheave wheels. These refinements enable the Ro-Way Door to provide quiet, effortless operation.

EXTENSION LIFT SPRINGS, sometimes called "pull" or "stretch" springs, accurately counterbalance the Ro-Way Door. They are mounted below the horizontal tracks for convenient, easy installation and adjustment. When tension is applied, the coils separate quietly, without friction. Extension Springs provide years of carefree service because they are efficient.

"TAILOR MADE" SPRINGS are made right in the Rowe spring factory *after the actual weight of the door sections is determined.* Each spring is matched with the weight of the completed door sections so that a correct balance of the door is obtained. Ro-Way made-to-order springs make easy operating doors.

ALL HARDWARE DOUBLY PROTECTED AGAINST RUST—*After complete fabrication* all hardware is *Parkerized* and then *painted* with metallic finish paint. Even the inside edges of the holes through the steel are Parkerized against rust. Scientific laboratory tests using Salt Spray solutions, and years of service, prove this to be one of the best known ways to prevent rusting.

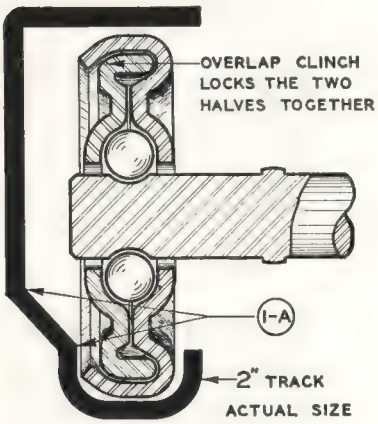


Fig. 627—Track Roller is ball bearing with double thick metal treads.

Ro-Way friction-reducing patented track prevents track rollers from rubbing against walls of track. The special shape of track as shown by "1-A", Fig. 627 increases its strength 28% over ordinary stock tracking.

Fig. 660 **Fig. 623**

Fig. 660—Lock Assembly is especially built for Ro-Way Doors. Key operated from outside and by thumb latch from inside.

Fig. 623—The Lock Bar enters a slot in each vertical track to securely lock door.

Fig. 624—Corner Bracket is made extra heavy and extra long. This extra strength and length permanently join End Stile and Bottom Rail. Lifting Cable is attached to extension of Corner Bracket—outside of vertical track. This "outside hook-up" provides convenient, easy installation.

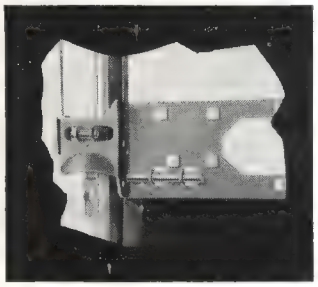

Fig. 624

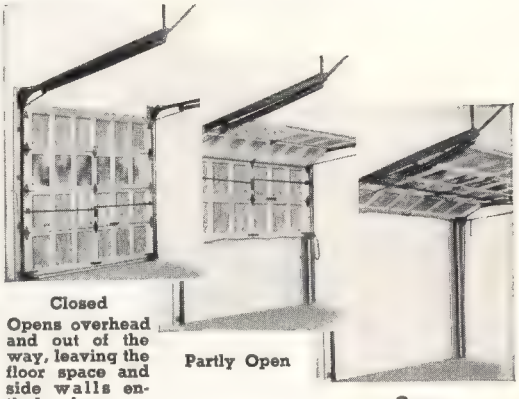
RO-WAY OVERHEAD TYPE GARAGE DOORS

GENERAL SPECIFICATIONS

Ro-Way Extension Spring Type Doors are made complete in the Rowe plant, with hardware attached, all ready for installation. Door sections, track and hardware are made to fit opening sizes. Millwork —Stiles and rails are 1⅜" or 1¾" thick Douglas Fir, Spruce or Ponderosa Pine (our option). Panels are ¼" thick Fir Plywood. Hardware—From 13 and 14 gauge steel are made 2 inch ball bearing track rollers, sheaves, also track and curved sections. Hinges, corner brackets and locking equipment are made in special designs for extra strength—longer service. Cylinder lock for key operation is included.



Closed
Opens overhead and out of the way, leaving the floor space and side walls entirely clear.

ANDERSEN *Windowalls*

• **Andersen Picture Unit Windowalls** provide broad views of the outdoors, giving the effect of spaciousness without adding cubic feet.

• This is the modern way to build a beautiful home.

• In the picture, to get this effect, ventilating casements are combined with a large center light of insulated glass.

• **Andersen Gliding Unit Windowalls** are a revolutionary kind of window with sash that glide from side to side, yet, when closed, are in the same plane.

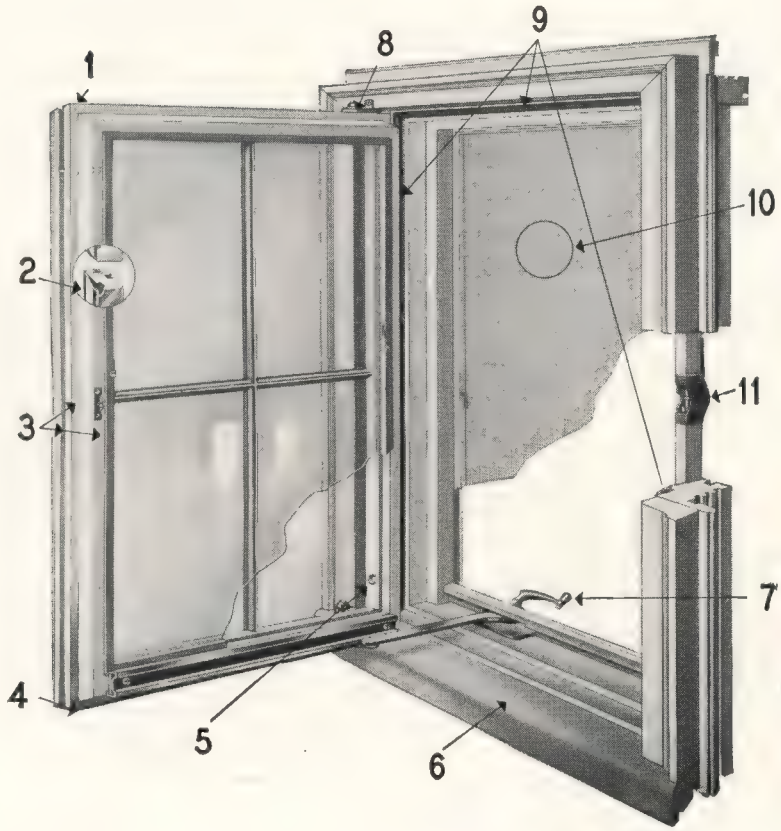
• Comfort and fuel economy are assured by efficient weatherstripping and double glazings.

• Gliding units are made in extra large sizes for expansive views outside and for bringing plenty of sunshine and fresh air inside.

Andersen CASEMENT WINDOW

OUTSTANDING FEATURES

1. Reinforced glued mitre joint eliminates exposed end wood.
2. Section through double glazing panel showing weatherstripping seal. The double glazing cuts radiation heat loss 60%.
3. Special design of sash eliminates sticking and binding. Glazed A quality glass, bedded in putty.
4. Weatherstrip attached to sash bottom rail makes tight seal at sill.
5. Vents for space between double glazing and sash help control condensation and frosting.
6. Frame sill has Andersen Master leakproof construction with lock sill joints and weathertight windbreak.
7. Bronze underscreen sash operator opens window easily and quickly. Holds sash in any open position.
8. Extension hinges swing sash out so that outside of glass can be washed from the inside.
9. Spring tension weatherstripping comes attached to frame at head and sides.
10. Popular flat type inside screen. Comes with fasteners attached. Lightweight, attractive and durable.
11. Sash lock pulls sash completely shut, then locks it. Also ejects it for easy opening. Independent of screen.



LEAKPROOF, WEATHERTIGHT, SUPERIOR IN CONSTRUCTION

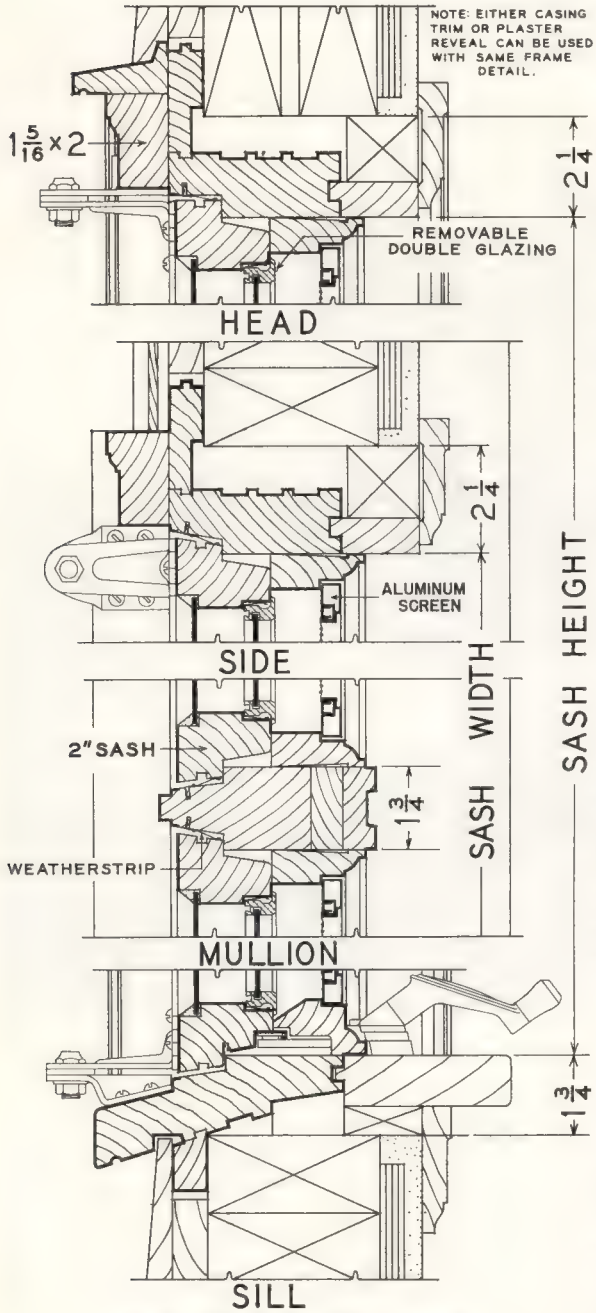
In the above picture you see all of the parts assembled into a complete casement unit.

Architects recognize the Andersen Wood Casement as one of the most weathertight windows on the market today. In tests made on an average residential casement (not weatherstripped), by the American Society of Heating and Ventilating Engineers, it was shown that air infiltration per foot of sash perimeter in a 10 mile an hour wind was thirty-two cubic feet per hour. With an Andersen Casement Window (weatherstripped) under the same conditions this air infiltration was cut to only two and one-half cubic feet per hour.

The Andersen Casement has also been proved leakproof under extreme rain conditions. In a Rain Storm Machine we produced a wind of gale proportions (45 miles per hour) accompanied by a rainfall equivalent to 1 inch in 15 minutes. This torrent was turned on to one of our Casements for periods of fifteen minutes at a time. Under these extreme conditions not one drop of water came through the joints between sash and frame, either during the driving rain or afterwards.

Andersen CASEMENT WINDOW UNIT

FOR ALL TYPES OF WALL CONSTRUCTION



Scale—Three Inches Equal One Foot.

Detail above shows installation in frame wall. Note reversible blind stop for either 3/4 or 1/2 inch sheathing. Plaster reveal inside finish can be used in place of extension jamb and casing trim and the same standard unit is used in all types of wall construction.

NOTICE TO BUILDERS

If you apply sheathing before setting the frames be sure to allow for the WEATHERTIGHT WINDBREAKS. Set sheathing back 1 5/8" from rough opening at the sides and top, 1 1/4" from face of plate at bottom. Be sure that the window frame is square before installing unit in the rough opening.

OUTSWINGING CASEMENT UNIT ANSWERS EVERY REQUIREMENT

The Andersen Casement Unit is an improved casement window that successfully combines the advantages of weathertight wood construction with the beauty of contemporary narrow line design.

Effective weatherstripping, double glazing, and leakproof frame construction provide exceptional window insulation. This engineered window is convenient and easy to operate, exceedingly weathertight, simple in construction and easy to install, well proportioned and unusually attractive in appearance.

THE COMPLETE UNIT INCLUDES:

FRAME—Pine, treated with Andersen chemical preservative, moulded outside casings, drip cap, 2" sill horns.

INSIDE STOPS and MULLION CASINGS—Pine.

SASH—Pine, 2" thick, treated, glazed with elastic glazing compound. Standard sash with wood bars, glazed SSA. Picture sash glazed with double insulated glass or single commercial quality 1/4" plate glass.

Insulated glass will be "Thermopane" which is two lights of 1/4" clear plate glass with a 1/2" dehydrated air space between them.

WEATHERSTRIPPING—Andersen Silver Seal, installed.

FURNISHED KNOCKED DOWN

OPTIONAL:

EXTENSION JAMBS—Pine for 5 5/16" wall.

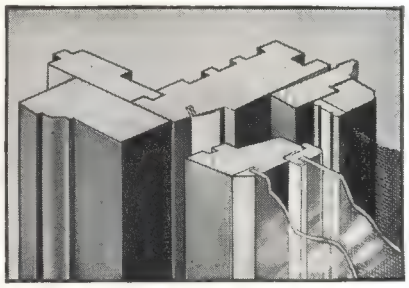
HARDWARE — Roto-gear, under-screen operator, extension type hinges, ejecting sash lock.

SCREEN—Aluminum frame, aluminum wire, fits inside on the stops.

DOUBLE GLAZING — Aluminum frame with weatherstrip, glazed S.S.A. bedded; rides on sash, removable.

Section through jamb at left shows location of compression weatherstrip, removable double glazing on inside of sash, and inside screen on the stops.

Frame and sash are made of selected clear Western Pine treated with Andersen Chemical Preservative in accordance with highest industry standards.

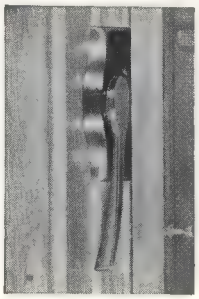


ENGINEERED FOR EFFICIENT SERVICE

Note the special outswinging sash construction with two point "refrigerator door" contacts and a full 1/8" clearance between sash and frame. Sash cannot stick or bind. They remain true and square because of extra thickness, a full 2", and strongly reinforced corner joints.

Tightness is insured by compression weatherstrips, yet sash always operate freely and easily. The ejecting sash lock releases the sash from weatherstrip contacts and will easily break paint bind. When closed it holds sash tightly shut and insures full weatherstrip contacts. Works independently of screen.

Extension hinges permit easy washing of outside glass from the inside. Roto-gear under-screen sash operator adjusts and automatically holds sash in any open position. Powerful and easy to operate. Wood frame inside screen furnished with fasteners attached. Light weight, attractive and durable. Double glazing panel (storm sash) has aluminum frame and metal weatherstrip seal. Fits on the inside of the sash. Cuts radiation heat loss 60%.



Left—Cam and lever ejecting sash lock. Bronze handle. Statuary bronze finish. **Right**—Roto-gear under-screen sash operator. Bronze handle and case, statuary finish.

Andersen WOOD CASEMENTS

HORIZONTAL AND DIVIDED LIGHTS

THE FOLLOWING PRICES INCLUDE

FRAME: K. D., with $1\frac{5}{16}$" x 2" Narrow Exterior Moulding. Drip Cap included. All parts completely treated with Chemical Preservative.
METAL WEATHERSTRIPS applied.
SASH: Treated, Wood Muntin Bars, Glazed SSA. Glass bedded in putty.
CLEAR PINE INSIDE STOPS AND MULLION CENTER CASINGS.

PRICES DO NOT INCLUDE

HARDWARE FOR SWINGING SASH, SCREENS, REMOVABLE DOUBLE GLAZING, EXTENSION JAMBS, INSIDE CASINGS, STOOL, APRON OR SETTING UP CHARGE.

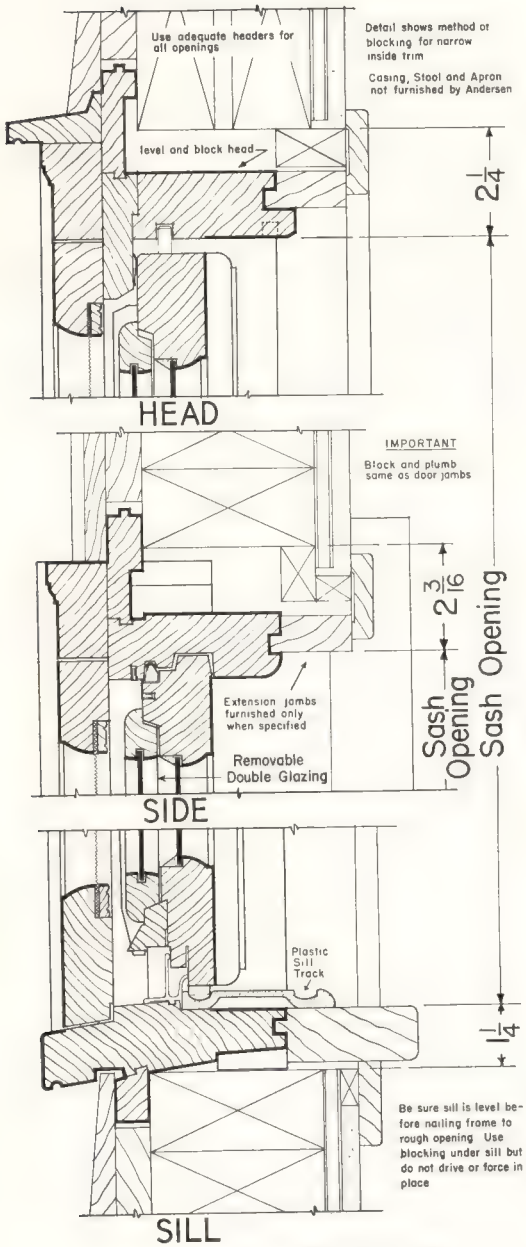
5—Pine Extension Jambs—Specify if wanted.

Items ★ Carried in Stock

Andersen GLIDING WINDOW UNIT

FOR ALL TYPES OF WALL CONSTRUCTION



Scale—Three Inches Equal One Foot

Detail above shows installation in frame wall. Note reversible blind stop for either 3/4 or 1/2 inch sheathing. Plaster reveal inside finish can be used in place of extension jamb and casing trim and the same standard unit is used in all types of wall construction.

Installation note—be SURE to set the sheathing back 1 1/2" at head, 1" at each side and 1 1/4" at sill, to accommodate the windbreak.

MULTIPLE OPENINGS

To arrive at masonry opening widths for multiple openings using 4 inch modular mullions, multiply number of openings by corresponding masonry opening width shown for single unit. To figure rough stud opening widths using 4 inch modular mullion, multiply number of openings by corresponding sash opening width for singles and add 4 3/8 inches plus 4 inches for each mullion center required.

FOR MODERN WINDOWALLS

The Andersen Gliding Window Unit was first introduced in 1940 and has since been successfully used on thousands of installations in all parts of the country. Its horizontal sliding action permits larger sizes than are practical in other types of ventilating windows that operate vertically or swing on hinges. Attractive design, easy installation, simple operation, weathertightness, adequate window insulation and wide opening sizes are some of the superior features that make this modern residential window the ideal WINDOWALL.

The schedule of stock sizes and layouts has been changed and further standardized to meet modular construction requirements and to include one light glazing. The frame has been redesigned with heavier jambs and narrower overall jamb width for greater installation flexibility. Certain mechanical improvements have also been made including more efficient weatherstripping and a new KYS-ITE plastic sill track.

THE COMPLETE UNIT INCLUDES:

FRAME—New design, with heavy jambs worked to detail, no inside stops required. Moulded outside casings, drip cap, 2" sill horns.

SASH—Pine 1 1/2" thick, Grade A glass, bedded and glazed with elastic glazing compound.

WEATHERSTRIPPING—Andersen Silver Seal, installed.

HARDWARE—Complete operating and locking equipment.

SILL TRACK—Moulded plastic, maple finish.

TREATING—Andersen chemical preservative.
Furnished knocked-down.

OPTIONAL:

EXTENSION JAMBS—Pine, for 5 5/16" Jambs overall.

SCREENS—Wood Frame, Aluminum Wire.

DOUBLE GLAZING—Wood Frame, glazed D.S.A. bedded, rides on sash, removable.

SUPERIOR OPERATING SIMPLICITY

Sash Opens Like This

Sash Comes Out Like This

Double Glazing Easily Removed

Closed: the sash are in line in the same plane like a casement window. Open: the right hand sash glides into an inner track so that the sash can pass each other. Sash are instantly removable without tools. Removable double glazing goes on outside of sash. Easily removed for cleaning inside the room. Operating equipment is simple, positive, dependable.

Andersen PRESSURE SEAL

DOUBLE HUNG WINDOW UNIT

A BRAND NEW IDEA IN WINDOWS —BUT IT'S BEEN TESTED FOR YEARS

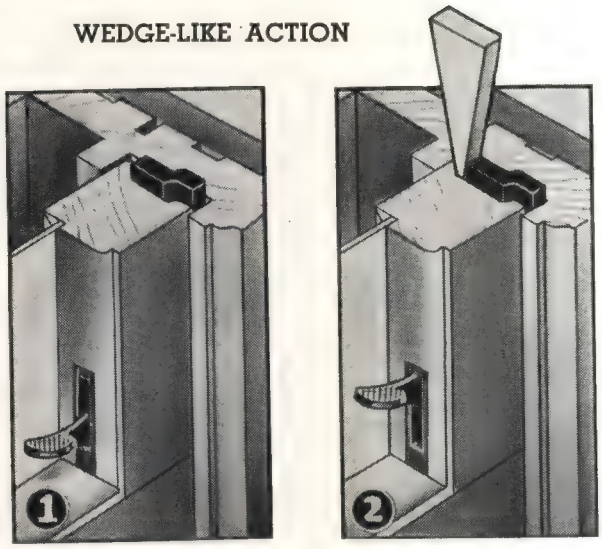
The Andersen Pressure Seal Double Hung Window Unit is new—the newest idea in window manufacturing.

But the basic principle of operation—the invisible pressure strips that make the window weathertight, that permit floating sash action, and that make possible the easy removal of both sash—the wedge-like action principle is seven years old.

Andersen has tested this wedge-like action in thousands of installations—given it the most exhaustive laboratory tests engineers can devise. Through all this testing the Andersen Pressure Seal Double Hung Window Unit has performed with amazing effectiveness.

Andersen checked every detail—every function—every standard of performance—refining and improving through war and postwar years until it was certain the new window would take its rightful place in the ANDERSEN WINDOWALL family.

WEDGE-LIKE ACTION



Lever Down— PRESSURE OFF

Lever Up— PRESSURE ON

SUPERIOR FEATURES

You've never seen a double hung window so easy to operate!

When the thumb levers are depressed, the sash float freely in the sash runs. There is no friction against weatherstrips or painted surfaces to make sash stubborn and difficult to move. They can be raised or lowered to any position quickly and with almost no effort.

Cleaning's Easy Because the Sash are Removable!

Just lift out the sash. No tools needed—and it takes only seconds. Sash are not hung on weights and chains or connected to springs or balances. Just lift up and pull out. With sash out, screens and storm sash can be changed from the inside.

QUICK AND EASY INSTALLATION REDUCES FINAL COST

Nail Frame in Rough Opening

Slip Sash Into Place

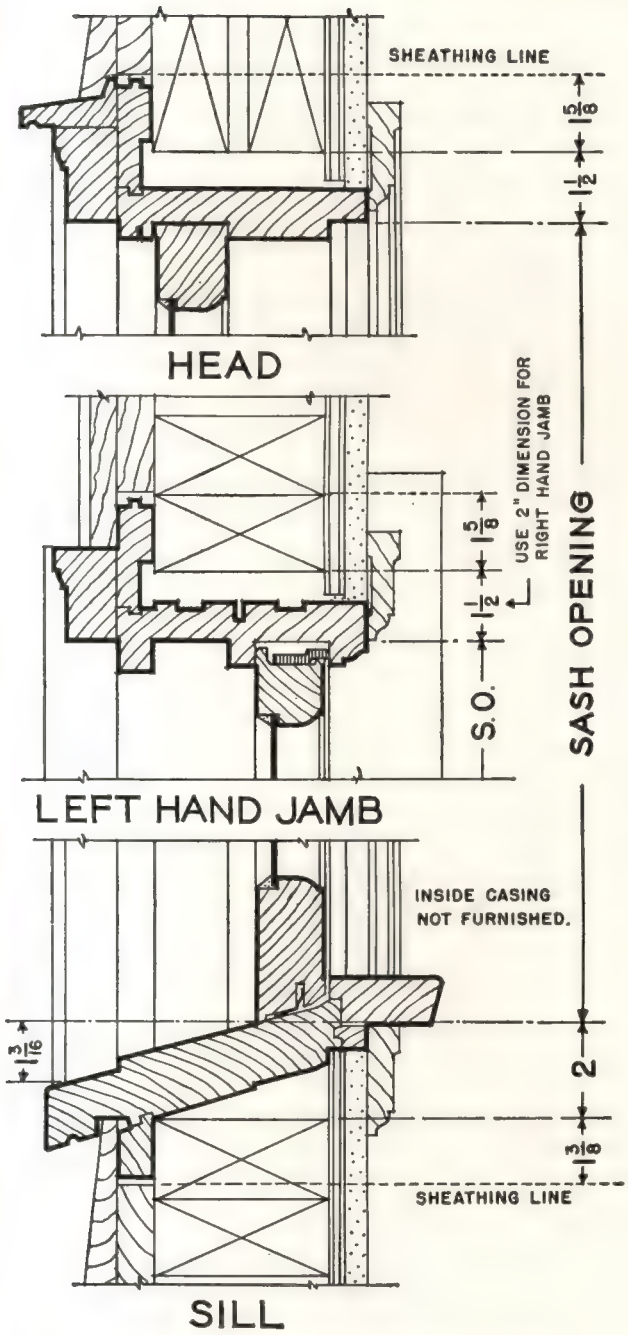
The frame is set in rough opening and held in place by nailing wide blind stop to studs. A weathertight wall joint is assured.

The sash come complete with pressure strips, weatherstripping and operating mechanism installed. They are all ready to be slipped in place from the inside. There are no weights to hang or other counterbalancing devices to install.

The standard frame detail can be used in any type of wall. The moulded inside stop on the side jamb greatly simplifies trimming out. A special fitted stool is included and only a simple inside casing or band moulding is required to complete the job.

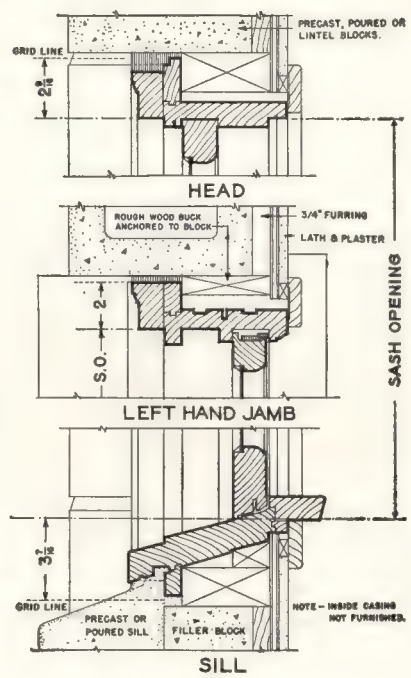
Andersen PRESSURE-SEAL DOUBLE-HUNG UNIT

INSTALLATION DETAILS



P-10—Installation in standard frame wall with reversible windbreaks (extension blind stops) in proper position for ¾" sheathing. Position is reversed for ½" sheathing.

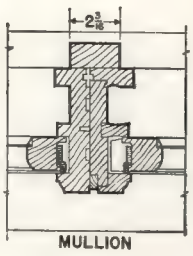
SCALE 3" = 1'0"



P-40—Installation in block wall with lath and plaster inside finish on furring strips. Note use of wood bucks which Andersen recommends for installation in all types of masonry walls. Windbreaks are ripped down for this type of installation.

SCALE 1½" = 1'0"

Standard left and right hand jambs are furnished for mullion post. The deep sash run in right hand jamb is required for sash removal. Note the filler piece between moulded inside stops to form inside mullion casing. A regular mullion casing can be added if desired.



Andersen PRESSURE-SEAL DOUBLE-HUNG UNIT

THE FOLLOWING PRICES INCLUDE

FRAME—Pine K.D., with $1\frac{5}{16}$ x 2 Narrow Exterior Moulding and 923 Drip Cap. Completely treated with Andersen Chemical Preservative. Andersen Silver Seal Weatherstrip applied to head jamb.

CHECK RAIL WINDOWS—Pine, 1½" thick, prefit, Preservative treated. Andersen Silver Seal Check and Bottom Rail Weatherstrip applied; Pressure Seal Weatherstrip and operating mechanism installed in sash. SSB glass, bedded and glazed with an elastic glazing compound.

STOOLS—Pine, returned to receive 2½" inside casing, not horned.

PRICES DO NOT INCLUDE

INSIDE CASINGS, APRON OR SETTING UP CHARGE.

Modular sizes of screens and storm sash may be used. See full size screens, Durall screens, wood bead storm sash, Modulator windows—pages 71 to 75 inclusive.

ROUGH STUD OPENINGS FOR MULTIPLE UNITS

Add sash opening widths plus $2\frac{3}{16}$" for each mullion, then add 3½" to this figure for overall rough stud opening width.

For example—a mullion unit with sash 3-0 wide has 6-$5\frac{11}{16}$" overall rough stud opening width. A triple unit with sash 2-4 wide has 7-7⅞ overall rough stud opening width.

MASONRY OPENINGS FOR MULTIPLE UNITS

Add sash opening widths plus $2\frac{3}{16}$" for each mullion, then add 4" to this figure for overall masonry width.

For example—a mullion unit with sash 2-8 wide has 5-$10\frac{3}{16}$ overall masonry opening width. A triple unit with sash 2-0 wide has 6-8⅜ overall masonry opening width.

EXTRAS

MULTIPLE UNITS

Mullion Unit (2-0, 2-4, 2-8, 3-0, 3-4 widths) 2 times price of single unit, plus....$0.87★
Triple Unit (2-0, 2-4, 2-8, 3-0, 3-4 widths) 3 times price of single unit, plus..... 2.34★
Quad. Unit (not stocked) 4 times price of single unit, plus..... 3.81

LONG SILL HORNS

10" Sill Horns at both ends of sill (wide side casings not included) add.....$0.73

FACTORY ASSEMBLY

Includes frame set up, window shipped separately.

For each single unit add.....$3.00

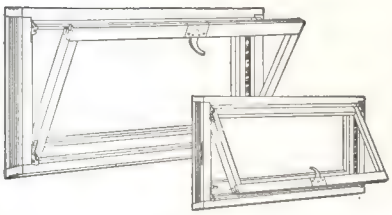
NOTE

It is not practical to assemble Pressure Seal Units at the factory for shipment by Common Carrier from Duluth.

Andersen BASEMENT-UTILITY UNIT

A "new look" has been given to the basement unit by Andersen! Besides having improved appearance, due to the new one-light sash, flexibility has been added by the dual hinges. The features of quick installation, weathertightness and large glass area are retained.

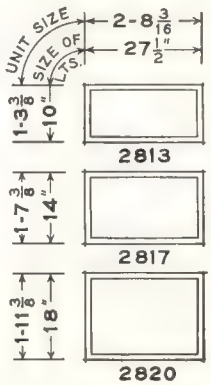
REVERSIBLE SASH

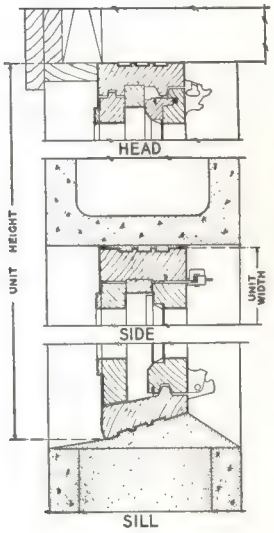


New dual purpose hinges permit swinging the sash from either top or bottom. Hinge members for both positions are attached and sash can be instantly reversed or removed without tools.

THE COMPLETE UNIT INCLUDES:

FRAME • GLAZED SASH • WEATHERSTRIP • SCREEN • HARDWARE • CHEMICAL TREATMENT • FACTORY ASSEMBLY CARTON PACKING • FITTED STORM SASH, when ordered.





INSTALLATION

Detail at left shows standard unit installed in typical 8" block wall, installation in a 12" wall is similar.

The unit can also be used in a poured concrete wall or stud construction wall.

For multiple width or multiple height installed in typical 8" block wall. Installation in a 12" wall is similar.

STOCK SIZES

One width and three heights meet practically all requirements for use in standard masonry, block basement walls and in modular frame construction.

Sizes are standardized to fit 8" x 8" x 16" block construction for openings 2 blocks wide and 2, 2½ and 3 blocks high.

NEW DISTINCTIVE FEATURES

of

METALANE WEATHERSTRIP

Now Used On

Radford Economy Window Units

It is manufactured from the famous Metalane aluminum alloy—the hard, smooth, glass-like surface is an ideal frictionless metal. These weatherstrips do not discolor or corrode.

The Radford Economy Window Unit is built of our highest quality stock frames, windows and balances, with new improved weatherstripping.

All Economy Window Units are furnished with Grand Rapids "Invisible" Sash Balances. "Hidalift" Sash Balances may be substituted at Oshkosh only, but order must so specify.

PRICES ON FOLLOWING PAGES INCLUDE—

FRAME: Of design selected. Set Up.

WINDOW: Of design selected, glazed SSB, installed in frame.

BALANCES: Installed in sash with tension applied.

WEATHERSTRIPS: Applied to sash and frame as required.

PRICES DO NOT INCLUDE

SASH BALANCES

Grand Rapids "Invizible" Sash Balances

The Grand Rapids "Invizible" Sash Balance enjoys numerous advantages and a number of exclusive patented features. It is designed for easy installation and to provide a lifetime of Invizible trouble-free operation.

Grand Rapids "Invizible" Sash Balances are used in all Radford Economy Window Units unless otherwise specified by the customer.

"Hidalift" Sash Balances

The Hidalift is the 100% concealed sash balance. They cut installation costs, and assure years of satisfactory service.

Radford Economy Window Units can be equipped with Hidalift Sash Balances if so specified.

MODULATOR UNITS

COMBINATION STORM SASH AND SCREENS

CHANGE YOUR SCREENS AND STORM SASH

from the inside!

EASY TO INSTALL • EASY TO CHANGE
EASY TO STORE

Easy to Change

ALL-YEAR VENTILATION

There is no trick to installing the Modulator. No special outside frame is needed. Several pieces of inconspicuous hardware are used. They are simply attached to your present window frame.

Once hardware is attached, upper and lower storm sash panels are put in place from inside the house. The lower storm sash can be replaced with a screen from the inside in a matter of seconds. Upper storm sash is left in place all year round—or it can be replaced with an upper screen which is available at a small additional cost.

Unit consists of 2 storm sash sections glazed SS. bedded, with wood beads, and 1 screen section wired 16 mesh aluminum wire, prefit cleated in one bundle. Hardware complete—including adjusters.

W. P. Pine. Woodlife treated.

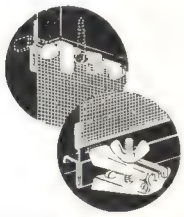
The Modulator is REALLY complete. Adjusters are included. Wired with Aluminum instead of Galvanized. Glass bedded in putty. Wood beads.

Items ★ Carried in Stock

Easy Handling—Light—flexible—without side frames, Durall can be rolled up for storage, tossed in a tub for cleaning, left in place for window washing.

Easy Installation—Simply apply top and bottom sill brackets and Durall snaps into place—*from the inside*—in minutes! No climbing, cutting or fitting.

Good Looks—Tension design keeps durable Durall taut and trim. No sagging or bulging. Aluminum, it needs no painting, never rusts or stains your house.



Convenience—Durall goes up, comes down, or swings free at the bottom at the flick of a finger. Just snap the patented slide devices of the top bar and turn the thumbscrews at the bottom of the screen.

DURALL

ALUMINUM TENSION SCREEN

offers all these advantages

No heavy side frames
Easy inside installation
Patented tension catches
Never needs painting
Multi-Strand edge
Can't rust or stain
Light, easy to handle
Good looking
Truly economical

The wire screening in the Durall Tension Screen is the well known Aldura aluminum with the New York Wire Cloth Company's famous Multi-Strand Edge. Durall top and bottom screen bars and the sill adjustment channel are made of 52S aluminum alloy. Hardware and accessories for the Durall Tension Screen—the top and bottom bar brackets, the sill brackets, and the bolts, wing nuts and screws are made of cadmium plated steel. These, too, are highly resistant to corrosion.

Designed for Double-Hung Windows Only

SPECIAL SIZES

(1) For special widths and lengths up to 48" wide and 70" long use price of next larger standard width and add $0.53.
Example: 35" x 57" takes prices of No. 3658 plus $0.53.

(2) For Screens over 48" wide; combine the prices of two standard sizes which together equal wider width or exceed it and add $0.53. These screens cannot exceed 48" in length.
Example: 51½" x 46" takes price of a No. 3246 plus No. 2046 plus $0.53.

(3) Lengths over 70" add 7½c for each additional inch to price of a 70" length plus $0.53.
Example: A 44" x 75" takes price of a No. 4470 plus 37½c (5" x 7½c) plus $0.53.

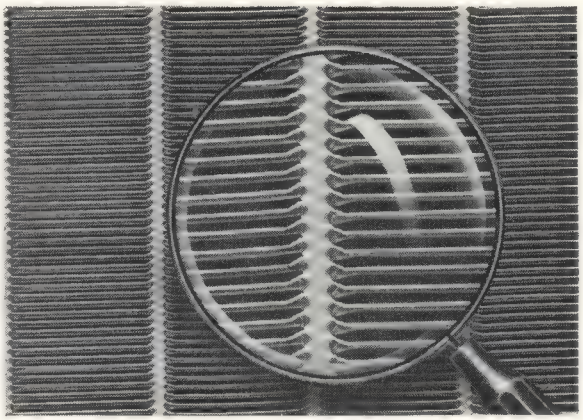
PORCH SCREENS

Following prices cover average run of straight porch screens with stiles and top rail not over 3 1/4 in. wide and bottom rail not over 5 in. wide. In the white. Minimum section 10 sq. ft.

1 1/8 in. Thick

Galvanized Wire, per sq. ft. (on full foot) $0.72
Aluminum and Bronze Wire, per sq. ft. (on full foot) ..... .90

KAISER ALUMINUM SHADE SCREENING



Kaiser Aluminum Shade Screening has thin louvres set at an angle against the sun. Thus they deflect the rays—and the heat—away from the window . . . *without blocking your view!*

Result: Your sunniest rooms are shaded, yet are light and airy. And they're as much as *15° cooler!*

What's more, interiors are protected against fading or deterioration due to hot sunlight. Pesky flying insects cannot enter.

And because Kaiser Aluminum Shade Screening is rustproof, it cannot stain frames or exterior walls. Made of tough, top-quality aluminum, it can't wear out, need never be painted. And it adds extra beauty to any window!

ALUMINUM SHADE SCREENS

We can now furnish full length window screens covered with Kaiser Aluminum Shade Screening. They must be made to order and cannot be furnished immediately from stock. Shade Screens can be furnished, 1 1/8" thick, only in widths for the following glass widths of windows:

20"	24"	26"	28"
30"	32"	36"	40"

Prices are based on the price of Full Length Screens on opposite page.

To the price of Aluminum Wire Screens on opposite page—

Add for Aluminum Shade Screens..... 98%

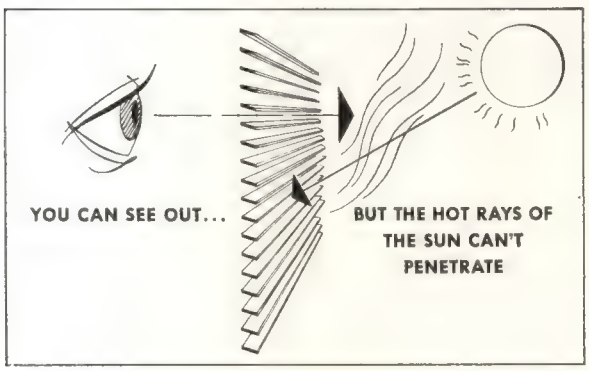
Example: A Shade Screen 24 x 24, 2 Lt. lists at $11.58 or 98% more than an Aluminum Wire Screen of same size.

Only widths shown above can be furnished. Smaller or intermediate heights take next larger size with no extra. Shade Screens are made to order and CANNOT be returned for credit.

KAISER ALUMINUM SHADE SCREENING IN ROLLS

We are able to furnish Kaiser Aluminum Shade Screening in full rolls of 50 lin. ft. each. The widths carried are those required to screen the sizes of window screens listed above. Shade Screening is not produced in widths under 21" nor in widths over 42".

Width	Per Roll (50 lin. ft.)	Width	Per Roll (50 lin. ft.)
21"	$24.30★	31"	$35.85★
25"	28.94★	33"	38.13★
27"	31.22★	36"	41.61★
29"	33.53★	42"	48.56★



Window screens covered with Aluminum Shade Screening serve a DOUBLE PURPOSE. They keep out the pesky insects as effectively as an ordinary screen. In addition, they serve as an awning in keeping out the direct rays of the sun—without interfering with free circulation of air.

Screens covered with Aluminum Shade Screening are economical compared with combined cost of conventional screens and awnings.

PRESERVATIVE TREATED

Blinds and Shutters give the Home Architectural Completeness as well as added Protection.

Blinds and Shutters are as necessary to the correct exterior treatment of the home as a well designed entrance. The home without them usually is severe, cold, uninteresting and lacks the necessary finished appearance. Morgan Blinds and Shutters are architecturally correct and are strongly constructed to give a lifetime of service.

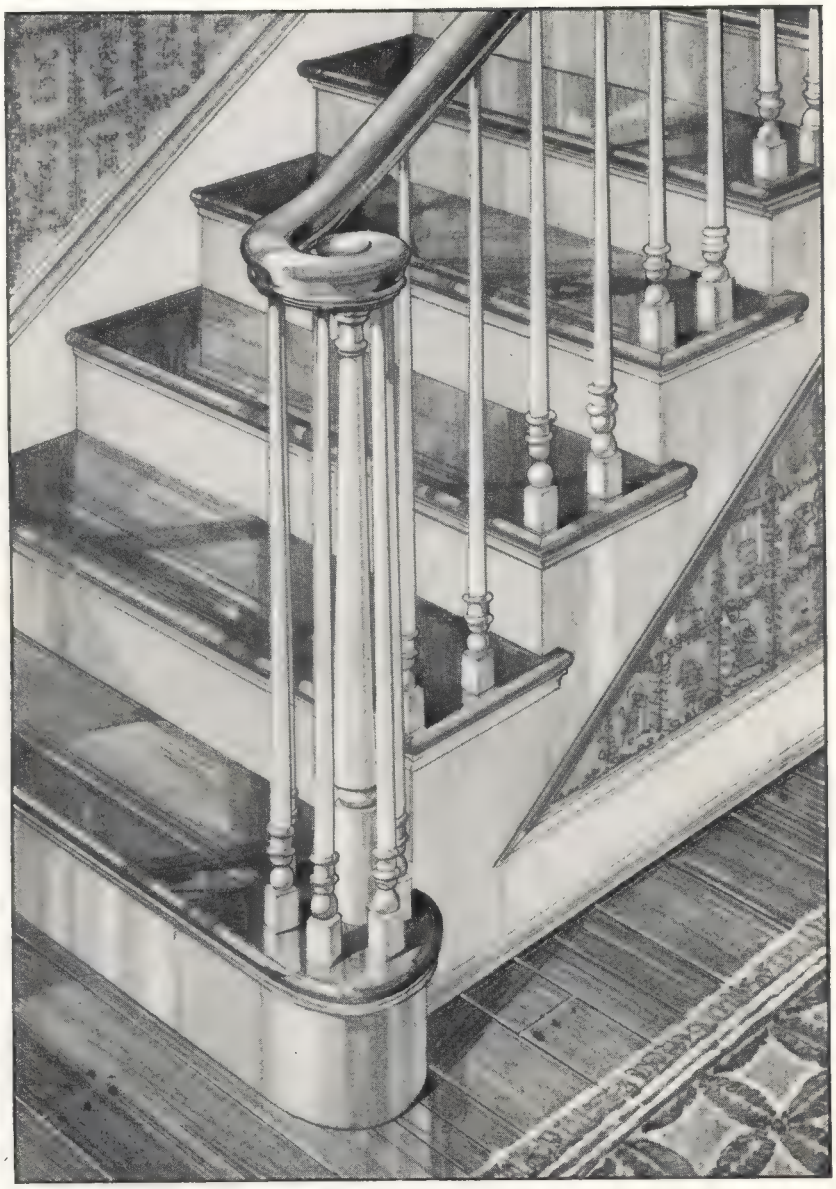
A SERIES OF BEAUTIFUL STAIRWAYS

. . . *Styled for* TODAY'S HOMES

On this and the following pages are shown a few examples of the interesting varieties of stairways possible to produce with Morgan Stair Parts.

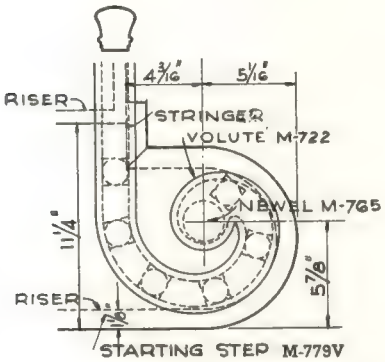
A stairway to be well designed must consist of graceful, well proportioned, perfectly matched parts made of smoothly finished enduring woods. Such a stairway reflects the good taste of its owner and is a source of lasting joy.

Around the stairway the whole scheme of interior finish and decoration is usually developed. A beautiful stairway encourages a beautiful interior. Understanding this, one can readily appreciate the importance of carefully considering every factor that enters into sound stair building, both from the standpoint of serviceability and lasting design.



M-856

Plans and Elevations on Pages 95 and 96



The CORNWALL HOUSE STAIRWAY—Connecticut

An eighteenth century Stairway of rare charm. A graceful Colonial adaptation well suited to present-day homes of traditional architecture.

The suggested Starting Section shown above includes:

M-779V Starting Step—M-765 Starting Newel—M-722 Volute—M-720 Rail (2¼"x2⅜")—M-892 Balusters.
(ALTERNATE—M-780 Starting Step—M-895 Starting Newel—M-719 Volute)

Your stair builder will tell you exactly what Morgan stair parts are required to meet your particular stair building problem.

FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

M-760

STAIRWAYS OF CHARM

Easy on the Eye . . . Easy to Ascend!

The keystone of an interior in rare good taste is a stairway of staunch simplicity and graceful sweep. Such a lovely stairway is yours today! You can have *all* of the advantages of correct design, accessibility and durability in the stairway for your home by selecting Morgan precision made, stock stairwork — and the cost will be well within the bounds of your budget.

•

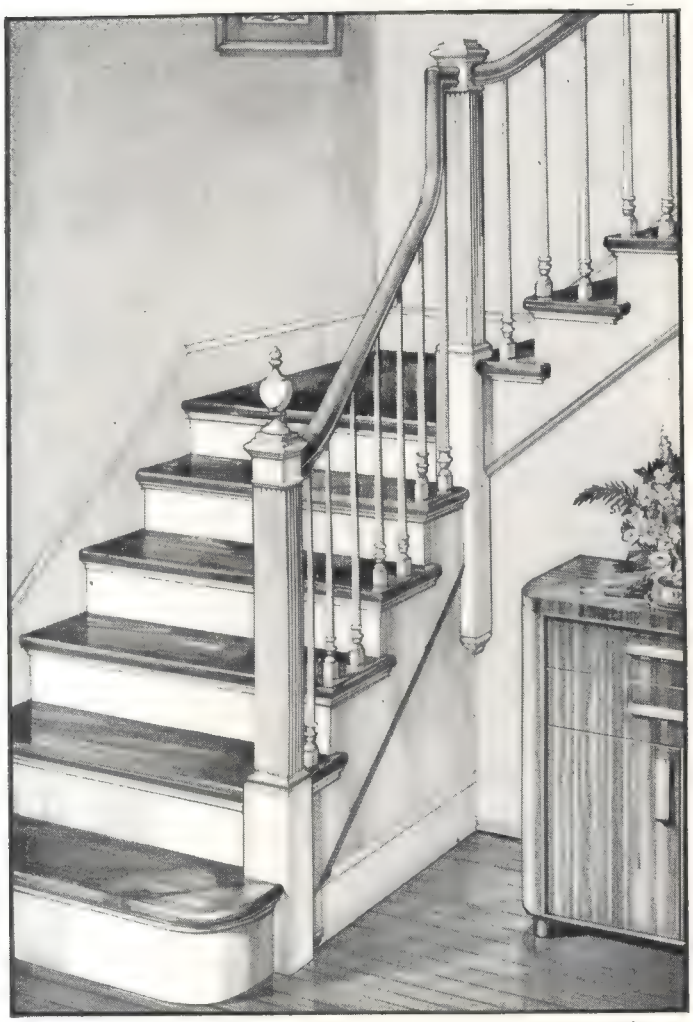
M-760 Stairway is of Regency design and includes: M-764 Starting Newel — M-726 Easement — M-742 Gooseneck, 2 risers — M-756 Angle Newel — M-720 Rail (2¼" x 2⅜")—M-777 Balusters—M-784 Brackets.

Three generations of leadership in Stairwork Designing and Manufacturing experience is the background of MORGAN Stairparts and is your guide to correct stair building.

Leading architects and stair builders for over 90 years have used Morgan Stairwork with complete satisfaction.

FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

STAIRWAYS



M-851

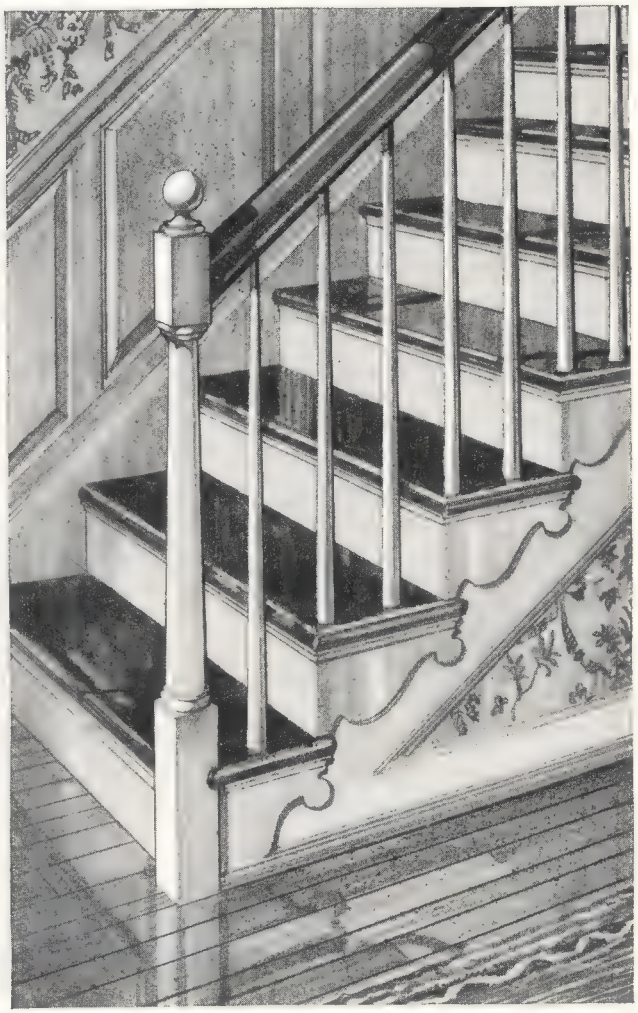
Plan and Elevation on Page 96

The GUILFORD STAIRWAY

A very beautiful Georgian Stairway reproduced from an original in an old eighteenth century home in Baltimore, Maryland. The reeded Starting Newel capped with an urn of graceful scale is truly a work of art.

The suggested Section of Stairway shown above includes:

M-720 Rail (2¼" x 2⅜")—M-726 Easement—M-731 Gooseneck 2 Riser—M-896 Starting Step—M-884 Starting Newel—M-892 Balusters—M891 Landing Newel.



M-859

Plans and Elevations on Pages 94 and 97

The NEWBURYPORT STAIRWAY

A simple and very charming reproduction of New England origin embracing balance, strength and beauty; all the result of most skillful designing.

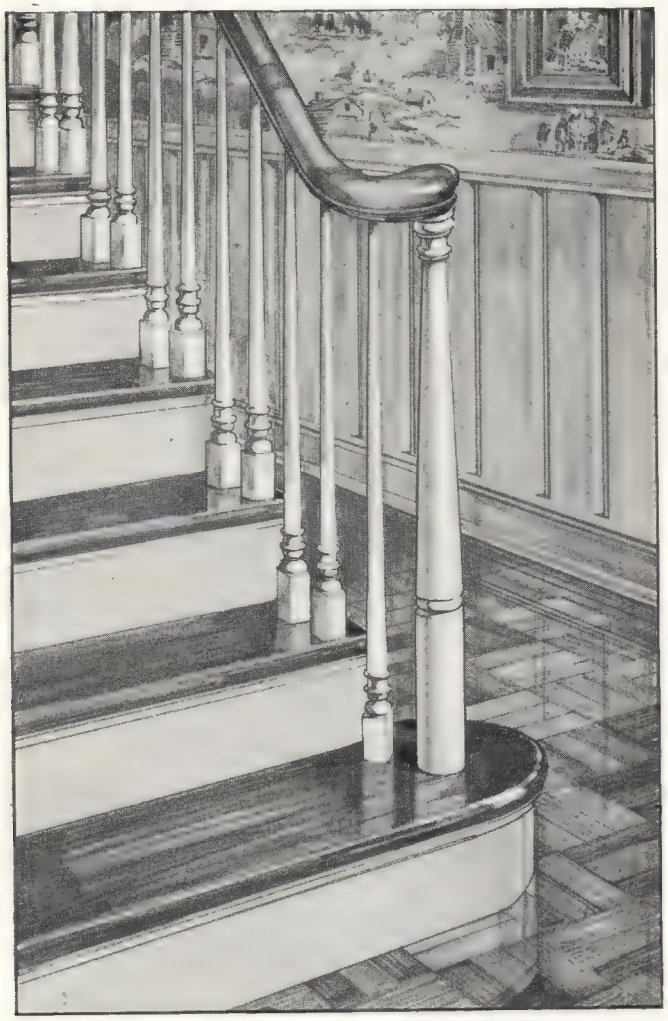
The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-769 Starting Newel—M-777 Balusters—M-882 Brackets.

Your stair builder will tell you exactly what Morgan stair parts are required to meet your particular stair building problem.

FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

STAIRWAYS



M-857

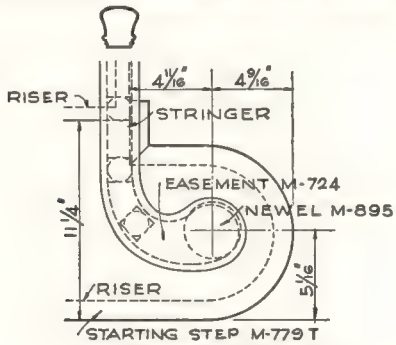
Plan and Elevation on Page 94

The EASTERN POINT STAIRWAY

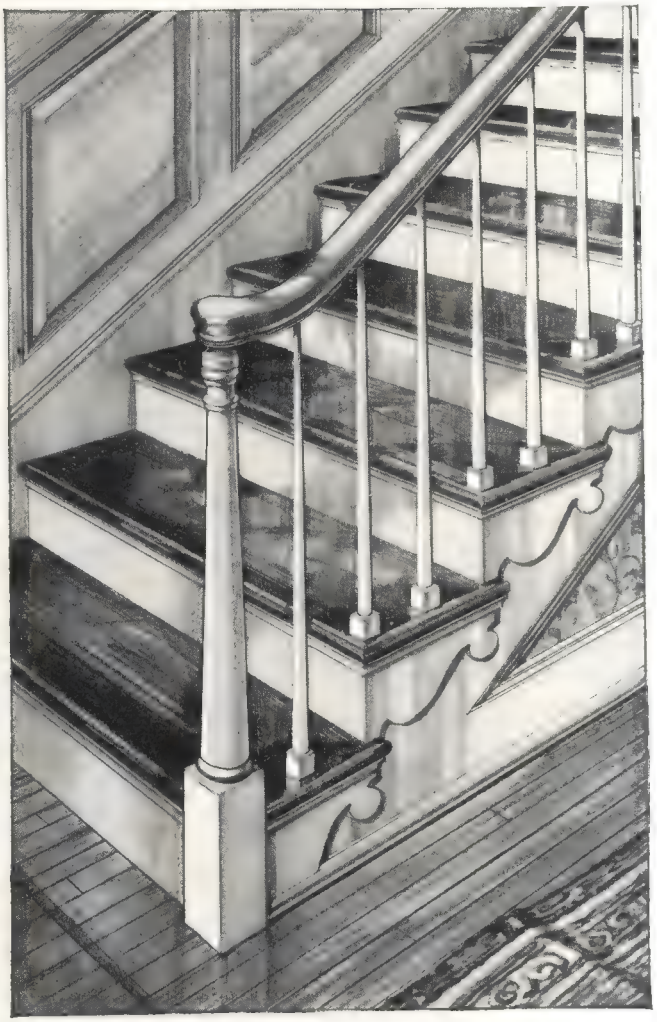
You will never tire of the simple beauty of this lovely Morgan Colonial Stairway. It is very pleasing to look at from any angle.

The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-779T Starting Step—M-895 Starting Newel—M-724 Turnout Easement—M-892 Balusters.



Showing Right Hand Turnout



M-858

Plan and Elevation on Page 97

The ANNAPOLIS STAIRWAY

From the State Capitol Building at Annapolis, Maryland, comes the inspiration for this unusually fine adaptation.

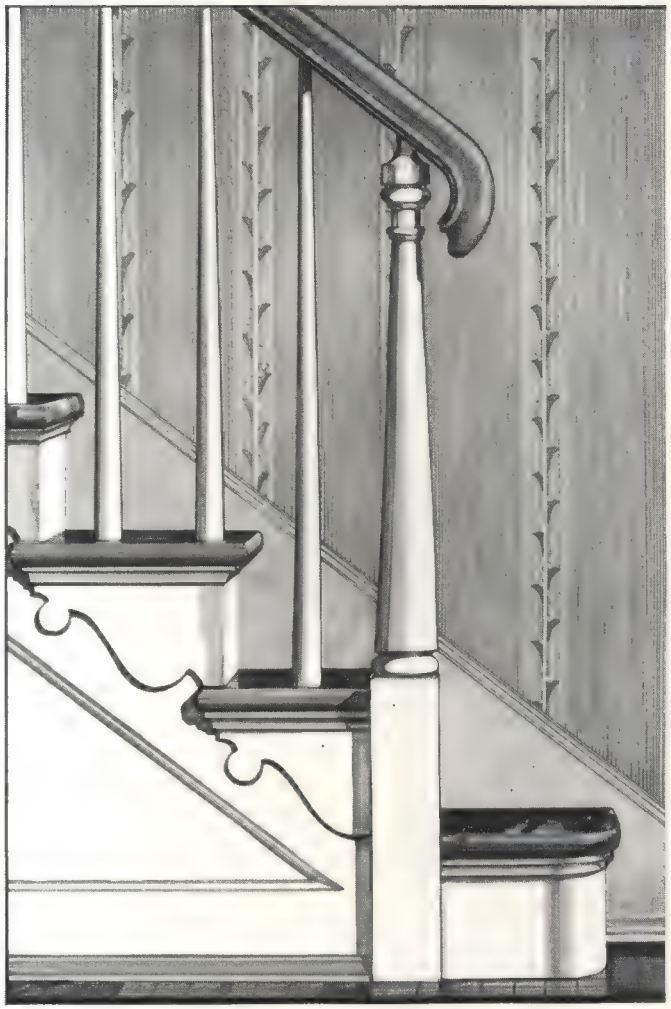
The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-766A Starting Newel—M-725 Easement with Newel Cap—M-894 Balusters—M-882 Brackets.

Your stair builder will tell you exactly what Morgan stair parts are required to meet your particular stair building problem.

FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

STAIRWAYS



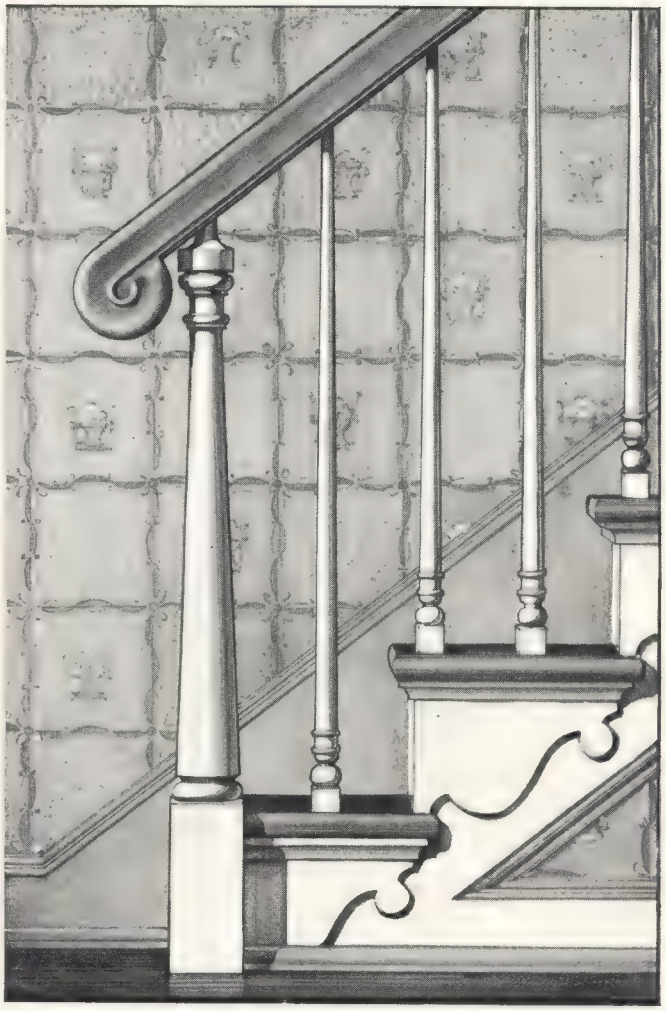
M-782

The ANDOVER STAIRWAY

A most attractive new stairway created by Morgan Designers. Adapted for use in modern as well as traditional homes.

The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-751 Starting Rail Drop—M-896 Starting Step—M-754 Starting Newel—M-777 Balusters—M-882 Brackets.



M-761

The VICTORIA STAIRWAY

For TO-DAY'S home! . . . Modern in design yet admirably suited for use in both traditional and modern homes.

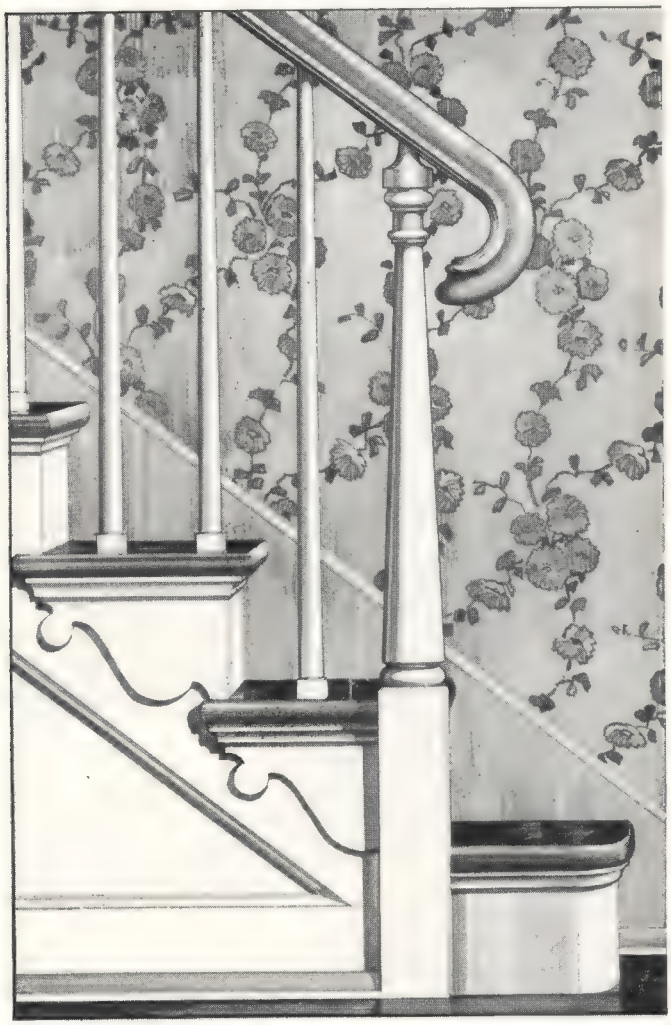
The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-750 Vertical Volute—M-753 Starting Newel—M-892 Balusters—M-882 Brackets.

Your stair builder will tell you exactly what Morgan stair parts are required to meet your particular stair building problem.

FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

STAIRWAYS



M-783

M-853

Plan and Elevation on Page 95

The STANTON STAIRWAY

A gracefully designed stairway that will add much to the beauty of any home.

The suggested Starting Section shown above includes:

M-720 Rail (2¼" x 2⅜")—M-752 Starting Rail Drop—M-754 Starting Newel—M-894 Balusters—M-896 Starting Step—M-882 Brackets.

The STEIGEL STAIRWAY

Some of the best of the old original Colonial Stairways were very plain—free from ornate detail and it is these plainer types that are most suited to present-day home building. An example of this simplicity of detail is shown above. This interesting design comes from an old Dutch Colonial house in Lancaster County, Pennsylvania.

The suggested Starting Section shown above includes:

M-896 Starting Step—M-885 Starting Newel—M-890 Landing Newel—M-720 Rail (2¼" x 2⅜")—S4S 1⅛" Balusters.

Your stair builder will tell you exactly what Morgan stair parts are required to meet your particular stair building problem.

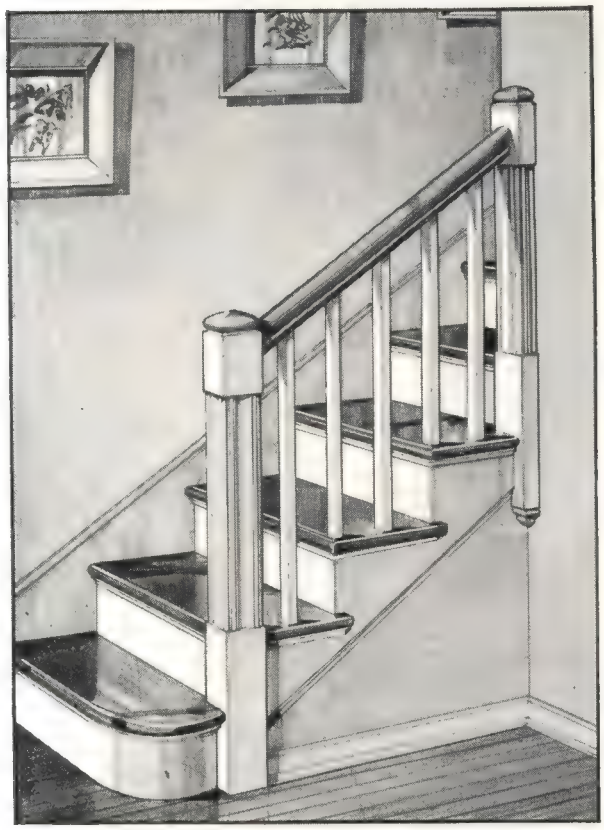
FOR COMPLETE DETAILS OF MORGAN STAIR PARTS SEE PAGES 92 AND 93

M-856A

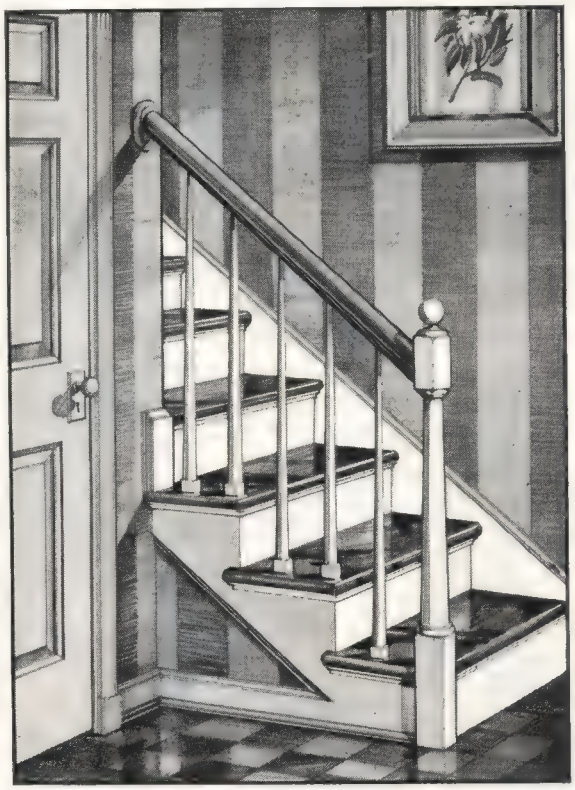
The COMBINATION OPEN *and* CLOSED STAIRWAY.....

STYLED *by* MORGAN

Here are three excellent examples of combined closed and open stairways. The M-720 Rail in M-856A and M-859A Stairways dies in Rosette M-905A while in Stairway M-853A half Newel terminates the run. Note variations in Starting Steps, Starting Newels and Balusters.



M-853A



M-859A

M-859A Stairway includes: M-769 Starting Newel—M-894 Balusters—M-720 Rail (2¼" x 2⅜")—M-905A Rosette.
M-856A Stairway includes: M-779V Starting Step—M-765 Starting Newel—M-722 Volute—M-720 Rail (2¼" x 2⅜") —M-777 Balusters—M-905A Rosette.
M-853A Stairway includes: M-896 Starting Step—M-885 Starting Newel—M-890 Landing Newel—S4S 1⅛" Balusters—M-720 Rail (2¼" x 2⅜").

PRECISION FOLDING STAIRWAYS

SIMPLE AND EASY TO OPERATE

A slight pull of the cord and the cleverly engineered counter weights silently ease the assembly into the down position. It is just as easy and simple to return it to its closed position.

HIGHEST QUALITY MATERIALS

Constructed of No. 1 kiln dried lumber throughout. Brackets and rocker arms made of cast aluminum, hinges of cast brass. Presdwood panel supplied, unless otherwise specified. We do not furnish trim. All parts are numbered and interchangeable.

SAFETY TREAD

Each step is protected with regular running board composition safety treads. Adds to appearance as well as safety.

REQUIRES NO ATTIC SPACE

Precision Folding Stairways do not take up valuable storage space in attic. Full height required above attic floor is only 36".

SHIPPED IN 1 PACKAGE

Precision Stairways are packed completely in one heavy carton. Assembled and ready for installation, which effects a considerable saving over other types.

2 STANDARD SIZES

8'-9" and 9'-9".
For ceiling heights 7'-0" to 8'-9" use 8'-9".
For ceiling heights 8'-9" to 9'-9" use 9'-9".
Figure from finished floor to finished ceiling. Not floor to floor.
Frame is made to fit 26" by 54" opening in ceiling.
Graduations on runners facilitate cutting off for different ceiling heights.

Precision Folding Stairways not stocked at Duluth.

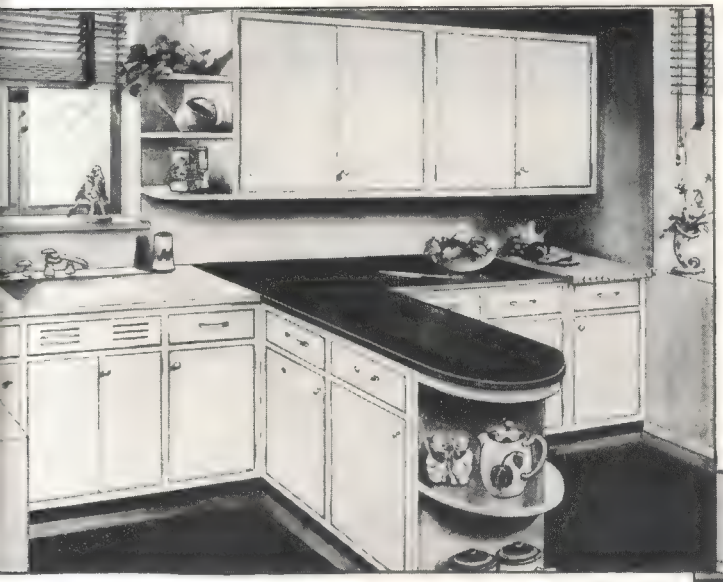
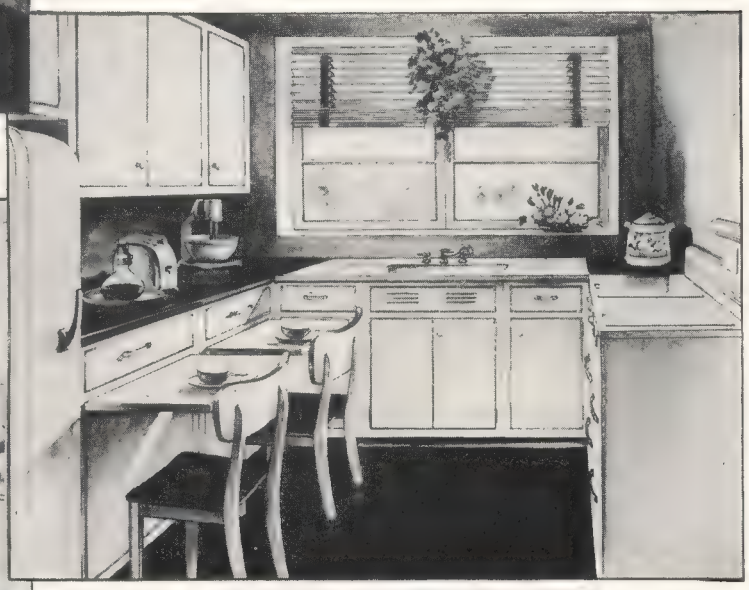
MORGAN *Sectional* KITCHEN CABINETS

for your MODERN KITCHEN

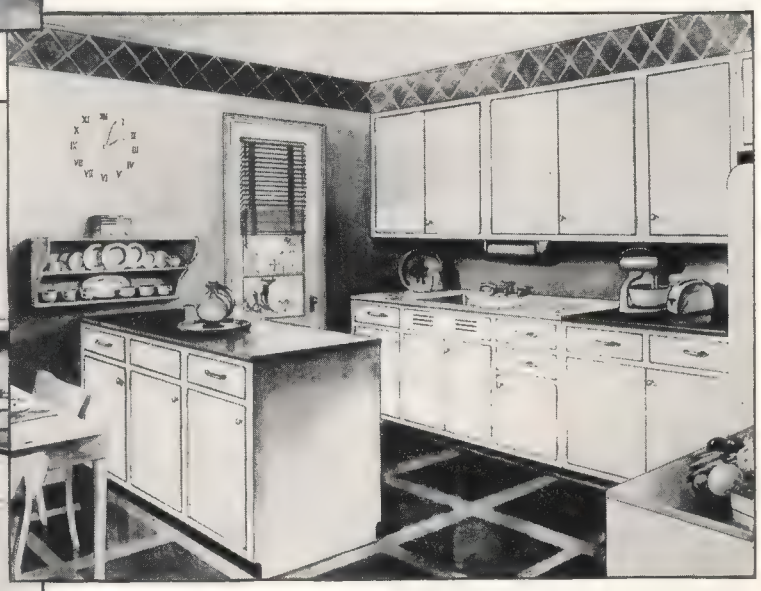


UP-TO-THE-MINUTE IN STYLE . . . EFFICIENTLY PLANNED . . . MADE BY SKILLED CRAFTSMEN . . .



MORGAN CABINETS FIT ANY SIZE OR TYPE OF KITCHEN . . .

THERE'S JOYFUL LIVING IN A MORGAN KITCHEN



Typical Planned Work Centers

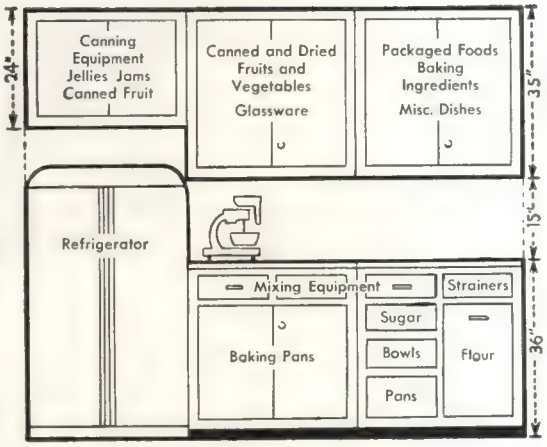
THESE EFFICIENT, STEP-SAVING COMBINATIONS ARE SIMPLE TO CREATE WITH MORGAN SECTIONAL CABINETS

Homemakers demand a modern kitchen of new exciting design and one that is efficient in every respect! The advantages of such a kitchen are obvious.

As the keystone of a truly modern kitchen, we offer Morgan Kitchen Cabinets.

Such a kitchen releases the fortunate homemaker from drudgery, makes cleaning easier, with definite savings in time and steps. Women get better results with less effort in this modernly arranged kitchen in contrast with the daily struggle in the old-fashioned, inefficient kitchen with out-moded equipment.

These new kitchens are the result of intensive research by homemakers, home economists, and engineers searching for the best practical labor-saving arrangement plus new and better equipment to best realize these advantages. It has been generally agreed that a kitchen should be organized into "work centers." Five major centers have been fairly well standardized.



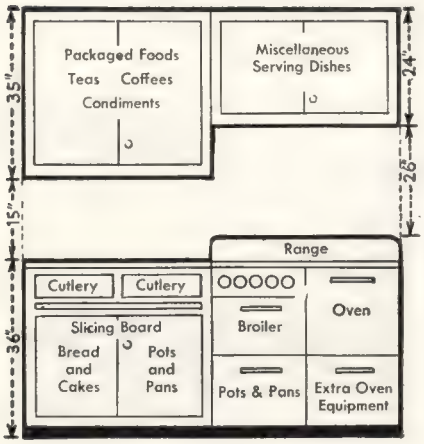
1 *Storage and Preparation Center*

1. Storage and Preparation Center

Here should be grouped food storage, including the refrigerator for perishable foods, shelves for canned and packaged goods, special drawers for flour and sugar, and a working surface for food prepartion with utensils, mixing-bowls, electric mixer, and baking pans close at hand.

2. Cooking and Serving Center

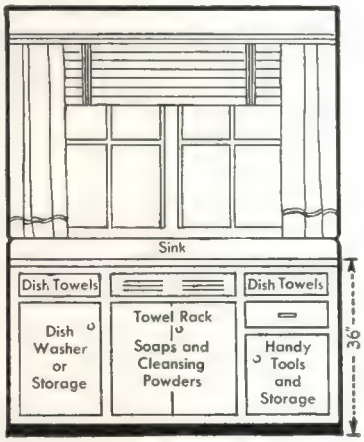
Here will be found the range and an adjacent working surface, with wall cabinets for the storage of serving dishes and glassware; also base cabinets for utensils used at the range.



2 *Cooking and Serving Center*

3. Cleaning and Dishwashing Center

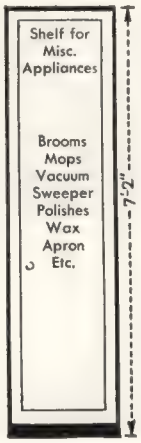
Here the center is dominated by the sink. An electric dishwasher may be permanently installed either adjacent to it or as an integral part of the sink base. The base cabinet provides for cleaning materials, garbage container, and a drawer for dish towels.



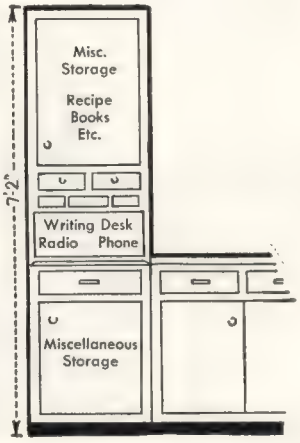
3 *Cleaning & Dish-Washing Center*

4. Utility Storage Center

This is comprised of at least a tall storage cabinet to store aprons, a broom, vacuum cleaner, wax polisher, together with shelves for linens, additional appliances and cleaning materials.



4 *Utility Storage Center*



5 *Planning Center*

5. Planning Center

A desk at convenient height with a comfortable chair, extension telephone and a shelf or drawers for cook-books, grocery lists, and odds and ends, is an important time-saver for the busy homemaker.

The 4 Basic Kitchen Layouts

REGARDLESS OF YOUR FAMILY NEEDS MORGAN STOCK KITCHEN CABINETS WILL PRODUCE JUST THE IDEAL "MADE-TO-ORDER" ARRANGEMENT YOU REQUIRE

Basically there are four types of kitchens—U-Type, L-Type, Corridor Type and Sidewall or the one-wall Type. Typical examples of these are shown to the right. Although layouts and sizes vary, and the position of the doors, windows and radiators vary, the kitchen nevertheless is of one of these basic types.

For maximum efficiency and ease of movement from one work center to the other, it is good planning to adopt as closely as possible one of these basic plans, taking advantage of all available space. The layouts shown on this page are planned for the utmost convenience. They are practical and incorporate every facility to make them well organized kitchens.

Regardless of the type or size of your kitchen, you may be sure Morgan Kitchen Cabinets will meet your every requirement. Morgan Cabinets are designed by leading kitchen research designers and harmonize with the latest in refrigerators, ranges and other kitchen equipment.

U-TYPE KITCHEN

A most efficient, compact arrangement. Everything is close at hand. Note order of work areas: refrigerator at service door where it should be, then follow the food preparation center and range close to dining room. Space between parallel work surfaces should be at least four feet.

L-TYPE KITCHEN

This plan is used where two adjoining walls are available for cabinets and other kitchen equipment leaving other walls for door and window openings. This plan provides for a nook or luncheon bar.

CORRIDOR-TYPE KITCHEN

Here cabinets and appliances are placed along two parallel walls with sink usually on one side and the refrigerator and range on the other.

SIDEWALL-TYPE KITCHEN

Used generally in small homes. All work centers on one wall in their proper order—"Storage," "Preparation," "Cooking" and "Serving."

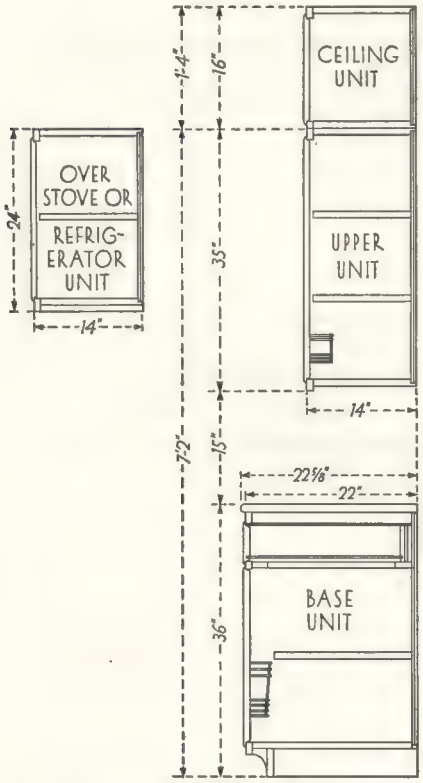
As Illustrated to Left

1. Counter Top $1\frac{1}{16}$" thick. Nosed front edge and both ends. Furnished in W. P. Pine.
2. Chromium Plated Drawer Pulls. Secured from the back.
3. Drawer lipped all around, solid sides and back, 3-ply bottom. (1 drawer in M-6036 and M-6040 with cutlery division.)
4. Improved Drawer Corner construction.
5. Flush Doors. Web-construction 2" centers with 2" stiles and $1\frac{3}{4}$" rails, lipped all around, beveled inside edge.
6. Elbow Catch. Friction Catch (not shown).
7. Heavy Back.
8. Two Solid Ends, $\frac{3}{4}$" thick, dadoed to receive bottom and slide frame, rabbeted to receive back and tongued to fit groove in Front Frames.
9. Chromium Plated Hinges. Also Chromium Plated Knob.
10. Lid rack.
11. Shelf $\frac{3}{4}$" thick Pine.
12. Bottom of cabinet heavy $\frac{3}{4}$" thick Pine.
13. Toe Space.
14. Drawer Slide Frame, Guides and Anti-Tipping Cleats included. (Not exposed).
15. Front Frame $\frac{3}{4}$" thick, grooved to receive Tongued Ends.



MEASUREMENTS OF MORGAN KITCHEN CABINETS

POINTS OF SUPERIORITY IN MORGAN CABINETS

Planned by noted architectural and domestic science authorities. The men engaged to design Morgan Period Woodwork also designed Morgan Kitchen Cabinets.

Scientifically conceived to render greatest efficiency in kitchen layout—time-saving—toil-saving!

Fit any space—meet any requirement. Hundreds of practical assemblies may easily and quickly be produced with Morgan Kitchen Cabinet units.

Strictly modern in design—exposed surfaces are all flat, dust-proof, sanitary, easy to keep clean. Morgan Cabinets harmonize with all of the latest modern designs, ranges, refrigerators and other kitchen utilities.

DOORS

Doors are full $\frac{3}{4}$" thick, 5 ply with Basswood veneer faces and are guaranteed not to warp, twist or buckle. Doors and drawers have lip fronts providing added security against dust and vermin.

Morgan doors are very light and easy on hinges. They will not sag. The beveled rabbet on Morgan doors will prevent binding.

Morgan cross banding on doors makes smooth exposed edges. Morgan face veneers are Basswood giving a smooth satiny appearance and providing a perfect painting surface.

DRAWERS

Morgan drawers have $\frac{3}{4}$" sliding frame under the drawer with guides on each side nailed into the side of the body so that they will have easy action at all times. Drawer Slide Frame is put together at factory.

HARDWARE

Special, improved tarnish proof Chromium hardware furnished for exterior, and Cadmium plated parts for interior of cabinets.

Morgan drawer pull is neat and attractive. Screws will not loosen as they are fastened through the drawer from the back. Morgan door knobs are sturdier, more attractive, and more solid as attached to the door from the back.

BODY OF CABINET

Made of No. 1 Pine ready for painting. Substantially constructed.

The face rim in Morgan Kitchen Cabinet base units is $1\frac{1}{2}$" on sides and bottom with a 2" top rail. Face rim of upper units $1\frac{1}{2}$" all around.

Morgan front frame is mortised and tenoned and glued together, whereas the frame in many cabinets is nailed only. Top and bottom end pieces of the body of some cabinets are made of Plywood, while the ends of Morgan Cabinets are made of solid Pine. Morgan front frame is grooved so that the end pieces that are tongued fit together perfectly.

In many cabinets $\frac{1}{4}$" panels are used for the bottom shelf, whereas Morgan shelves are of solid Pine.

Working heights are full 36" inc. counter—the most convenient height for the average housewife. Eliminates tiresome stooping.

Space arrangements in all Morgan Cabinets were worked out by domestic science authorities and consequently assure minimum waste of motion and time. Utensils are always where they should be—always within easy reach and never in the way.

Morgan Kitchen Cabinets are made so regular stock sinks and drainboards of porcelain, tile, Monel Metal, Stainless Steel, Bakelite, Formica or plain wood fit perfectly. Note: Your dealer can furnish any type of sink or counter top desired.

Furnished unpainted to enable the painter to finish cabinets to harmonize with the color scheme of the kitchen. Already painted cabinets often clash with other colors in the kitchen.

Continuous toe space at base of cabinets is provided for working comfort and to keep front of base free from mop stains. (No legs to catch dust.) Metal bread and cake drawers and flour container of special heavy sheet tin. Metal flour bins are of AAA charcoal tin.

Morgan Kitchen Cabinets can be easily and quickly put together. All pieces are clearly marked so that "A" fits into "A"; "B" into "B", etc. Furthermore, each carton contains full direction sheets.

THE COMPLETE MORGAN SINK CABINET

IN THE THREE MOST POPULAR SIZES

CABINETS MADE OF No. 1 PINE, HARDWARE INCLUDED, CARTON PACKED

NOTE: These are the finest quality units of this type and are not to be considered in the same class as ordinary competitive sink cabinets. CABINETS FURNISHED WITHOUT SINK TOPS.

Here is the new Morgan Sink Unit in the three most popular sizes and the most practical layouts. Planned for the utmost convenience to the homemaker. Its features are many — correct working height (3'-¼"); continuous toe space; Chromium hardware of modern design, generous storage space.

These well made cabinets are of the same layout as the rest of the Morgan Line of Kitchen Units. When using one of these Sink Cabinets with other Morgan Cabinets you can, if desired, use M-6092 Base Extension Strip to line up cabinets so that the fronts will be uniform.
Priced within the reach of all—Morgan Sink Units because of their excellent quality and workmanship represent values that are outstanding. When planning your Morgan kitchen be sure to include one of these units. Available at your local lumber dealer.

Items ★ Carried in Stock

RADFORD TAILOR-BUILT KITCHEN CABINETS

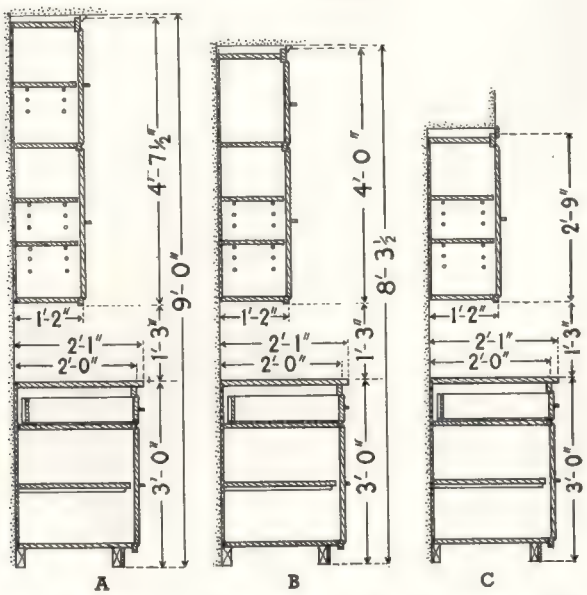
The Radford Company offers their original method of furnishing complete stock kitchen cabinets—made in a single section and fitted to each individual kitchen.

Briefly—we stock all of the standardized parts for this new cabinet—doors, drawers, shelves, counter tops, ends, etc. The purchaser selects the sections required that most nearly fill the space available. Then we build the front in one piece so that it absolutely fits the space to be filled.

The Radford method means the lowest possible price, and a cabinet that is tailor made for each kitchen.

The Radford Kitchen Cabinet offers every advantage of a fine custom built cabinet at a low stock price. Actually, we make possible a better cabinet than the average custom built product, because, by manufacturing the parts in large quantities and by offering many valuable accessories, we are able to include numerous features in the Radford Kitchen Cabinet that would be absolutely prohibitive in price if made in small quantities.

The adaptability of the Radford Kitchen Cabinet to any size of kitchen or pantry is one of its strongest features. By our method of construction it actually does fit in any space and in a room of any shape.



ADAPTABILITY TO HEIGHT

The Radford Kitchen Cabinets may be used in either of two ways as regards height.

First, they are built up to the ceiling.

The ordinary ceiling height is approximately 8'-3½". Cross section B on this page shows the installation for 8'-3½" ceilings. H Upper Sections detailed on page 142 are used.

The H Upper Sections are so designed that by narrowing top rails the height of the cabinet can be reduced for approximate ceiling height of 8'-2".

For 8'-0" ceilings top rails of H Upper Sections are narrowed and space between upper and lower cabinets must be reduced from 1'-3" to 1'-1¾".

But occasionally there are 9'-0" ceilings in new homes and more often in old homes. The 9'-0" ceiling is provided for as shown in cross section A on this page. HH Upper Sections detailed on page 142 are used for 9'-0" ceiling heights.

Note that cabinets are made slightly less than ceiling heights to allow for irregularities in plaster and for ease in placing. Cove mould is furnished to cover any space remaining and to scribe against ceiling.

Second, the most approved installation today is the cabinet 7'-0" high, plastered down from ceiling to top of cabinet. Cross section C on this page shows this installation. L Upper Sections detailed on page 142 are used for 7'-0" cabinets.

The Base Sections are 3'-0" high, with allowance of 3⅝" for toe space included. The Base Section is set on two pieces of 2 x 4 (standard size 3⅝") placed on edge. If it is desired to have the top of counter or sink lower than 3'-0", the toe space may be reduced or omitted altogether, making possible a base height of from 2'-8⅞" to 3'-0".

In many installations there are spaces above windows, refrigerator, stove, etc. to be filled. Practically any such space may be filled with L, T or TT Upper Sections detailed on page 142.

RADFORD TAILOR-BUILT KITCHEN CABINETS

ADAPTABILITY TO WIDTH

Here the Radford Kitchen Cabinet excels. The purchaser first decides on the type of sections required. Then, from the sections on pages 140 and 142, select those whose combined width will closest approximate the space to be filled. The combined width of sections should be at least 2" less than the space to be filled. The customer then leaves the matter entirely to us and when delivered your Radford Kitchen Cabinet exactly fits the space in your room. The only exception is that the widths of Side Sections on page 140 are constant and cannot be varied.

ADAPTABILITY TO DEPTH

Note the added depth of the Radford Kitchen Cabinet, with tops full 2'-1" deep and base sections 2'-0" deep. These are designed for use with modern refrigerators and stoves.

The base sections of Radford Kitchen Cabinets are 2'-0" deep to face of front (not including lip fronts or hardware). They can be reduced to 1'-10" deep, or any intermediate depth from 1'-10' to 2'-0" inclusive without added cost. Counter and sink tops are made 1" over the base depth.

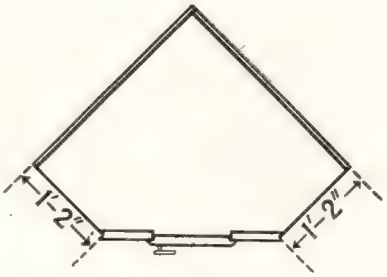
The upper sections of Radford Kitchen Cabinets are 1'-2" deep to face of front (not including lip fronts or hardware). Depth of upper sections can be reduced to any other dimensions without change in price. Depth of upper sections can be increased at added cost.

ADAPTABILITY TO SHAPE

Provision is made for building Radford Kitchen Cabinets around corners, either external or internal. External corners are seldom used.

For internal corners, the base sections are butted at right angles. At least one of the base sections adjoining corner should have door and shelves so that shelves may extend back into corner for surplus storage space.

However, for the upper sections of internal corners, special corner sections are necessary so that upper sections will line up with the lower sections. Details of upper corner sections are illustrated on page 142. Cross section is shown herewith.



PERFECT CONSTRUCTION

The Radford Kitchen Cabinet is, in reality, a handsome custom built cabinet. Every detail of construction has been perfected. Every convenience has been provided.

The fronts are all in one piece.

The doors are flush, giving a sanitary smooth surface. They are light and of special construction.

All doors and drawer fronts are lipped all around to keep out dust and improve the appearance.

Radford Stock Kitchen Cabinets are made of pine, for paint or enamel finish. Flush doors are furnished in unselected birch.

And the whole cabinet is so sturdily constructed that it will last not one but several life times.

HARDWARE

The hardware (not applied) is included complete with the Radford Kitchen Cabinets.

Our hardware is kept up-to-date in design. The finish is bright chrome.

SINK AND CABINET TOPS

The finest tops for Radford Kitchen Cabinets are the DeLuxe Formica and Linoleum Sink and Cabinet Tops shown on pages 131 and 132. Made in a wide variety of colors, these beautiful tops combine adaptability for any size of cabinet with every practical feature found in factory built tops. Ask for special circular of DeLuxe Tops.

In many installations, linoleum tops are put on Radford Kitchen Cabinets by local linoleum stores at the same time the floor linoleum is laid. For this purpose we furnish ¾" wood tops on which linoleum is applied. See page 134 for these ¾" wood tops.

On pages 154 and 155 you will find Chromtrim Metal Mouldings for all sink and counter top installations.

40"	2.02	...	...	3.58	...	..	3.18	...	...

To arrive at prices for sides of trim, add together necessary parts from these tables. For example a side of trim for mullion window 24 x 16, 2 Lt. W. P. Pine is built up as follows:

2 Cross Members	$2.68
1 Vertical Member	1.30
1 Mullion and Stops	.88
Total	$4.86

It is IMPORTANT in ordering sides of window trim that order state the frame number with which trim is to be used, so that proper mullion casing is furnished.

RADFORD NARROLINE TRIM

(For use with frames No. 601 and No. 612)

Mullion Casing R-2546—3/8 x 1 1/2
(For use with frames No. 1000 and No. 1005)

Casing cut long enough for mitering, but not mitered.

To arrive at prices for sides of trim, add together necessary parts from these tables. For example a side of trim for mullion window 28 x 20, 2 Lt. W. P. Pine is built up as follows:

2 Cross Members	$3.34
1 Vertical Member	1.65
1 Mullion and Stops	1.03
Total	$6.02

It is IMPORTANT in ordering sides of window trim that order state the frame number with which trim is to be used, so that proper mullion casing is furnished.

MORGAN REGENCY TRIM

SIDES OF REGENCY DOOR TRIM

For Use With Frames No. 801, No. 821, No. 1030 and No. 1035.

Consisting of

Casing R-2540—¾ x 2½. Base Block R-2543—⅞ x 2¾. Door Stop R-8542—½ x 1⅝ at extras shown.
Door Trim shipped without stops unless stops are specified.
Casings cut long enough for mitering, but not mitered.

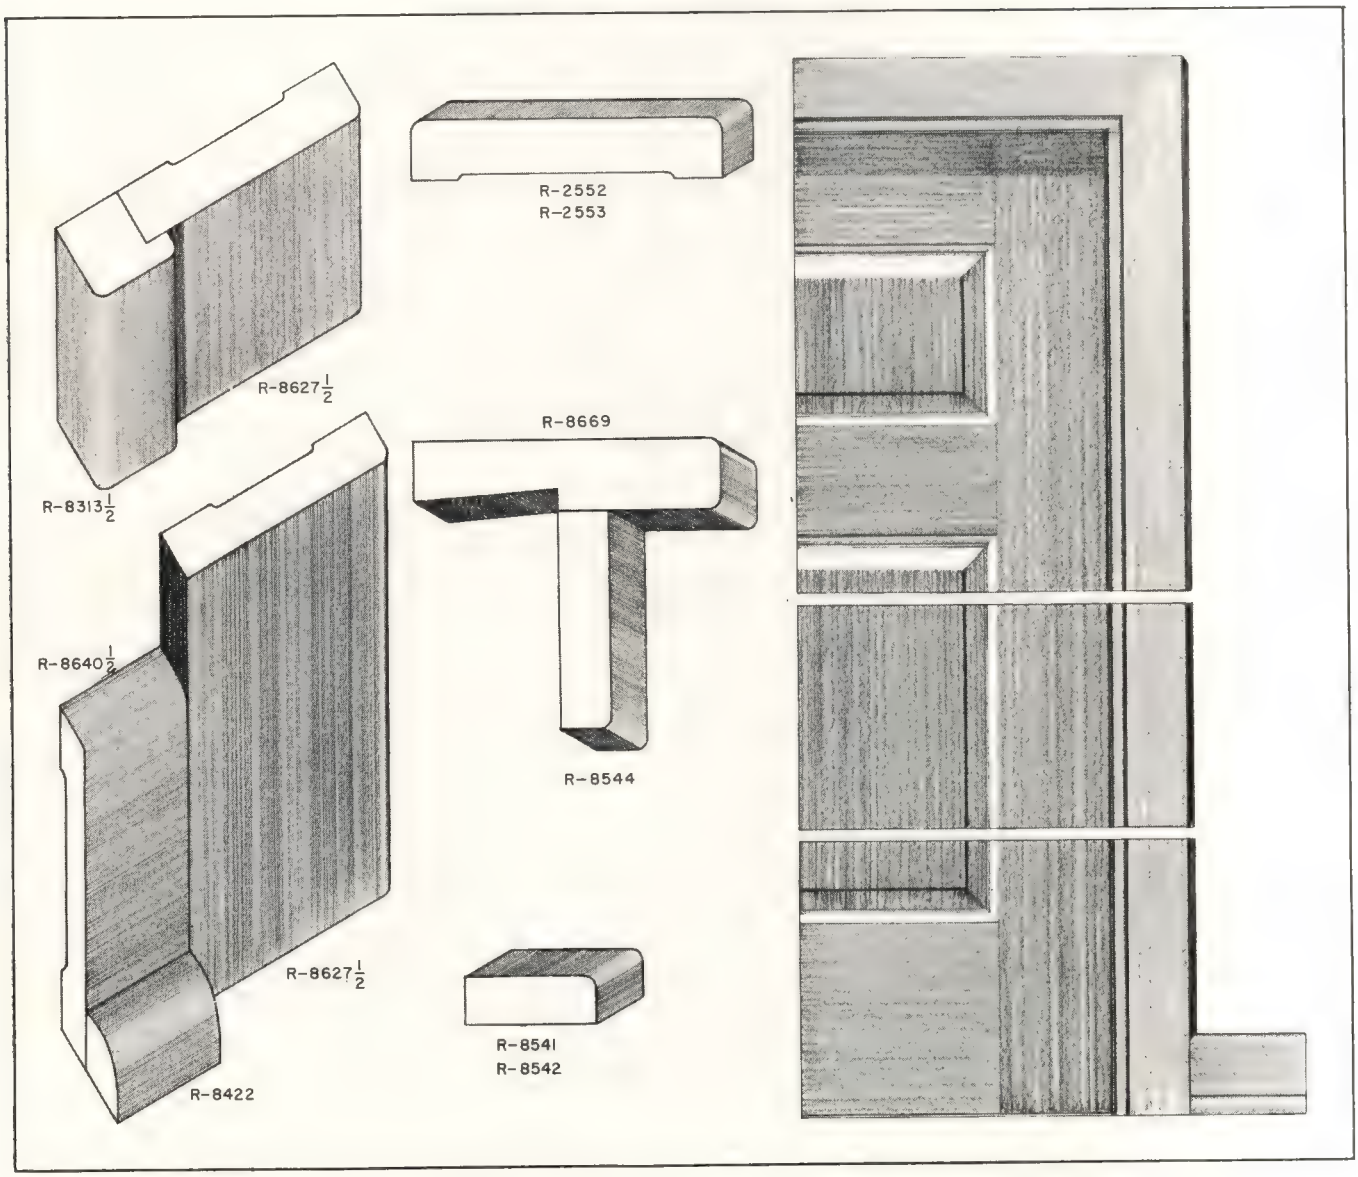
All Trim listed on this and preceding page is carried in stock in long lengths in W. P. Pine.
It must be cut to length after receipt of order, requiring several days' time.

RADFORD COLONIAL TRIM



This simple trim is an old favorite. It can be used especially well with Colonial doors and with the popular flush hollow-core doors. A surprisingly large number of architects are specifying this Colonial Trim in the low and medium cost homes. Back band may be used at added prices shown.

Illustrations above suggest suitable base mouldings for use with Colonial Trim. Lineal foot prices on pages 151 and 152.

Unsel. Birch and Pl. Red Oak Stops furnished only in R-8090—½ x 1⅝.

Inside Jambs shipped without stops, unless stops (with design number) are specified on order.

EXTRAS

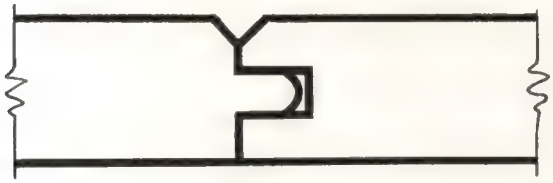
1. For jambs wider than 5¼", add for each additional 2" or fraction in width 35%
2. For jambs less than 5¼" wide, add for cutting down $0.60
3. For openings wider than 3-0, add for each foot or fraction 20%
4. For openings higher than 7-0, add for each foot or fraction 30%
5. For sliding door jambs, double above price for same size.
6. For jambs made of two kinds of wood, add to highest priced wood 2.50

KNOTTY PINE PANELING

Knotty pine boards worked to pattern KP-20 come in 6, 8, 10 and 12 inch widths. In applying, it is suggested that the boards be stood on an S4S base, which can be taken from dealer's yard stock in No. 1 or 2 common grade. Width depends on owner's choice and ceiling height.

At the ceiling use any size of cove that may be desired —R-8024 or R-8025. We recommend using regular stock coves in clear grade for this purpose.

PRICES IN CURRENT DISCOUNT FOLDER



KP-20

Horizontal Knotty Pine Paneling

Knotty Pine Paneling can be used to excellent advantage if applied so that the boards and moulding run horizontally instead of vertically. This saves headers between studs and as a result is considerably cheaper to apply. The effect is very handsome, in fact is preferred by some builders and architects. It gives the appearance of added size in a room.

METAL VENTILATORS FOR EVERY PURPOSE

ATTIC VENTILATORS—Flush Type

No. 500

These Leigh Ventilators are built of Double-protected steel. DOUBLE-PROTECTED STEEL has a corrosion resistant zinc coating integrally bonded to the steel—*plus*—a bonderized coating. Bonderizing is the protection that protects the finish of the most expensive automobiles. It is not only corrosion resisting but also provides an ideal paint base. It takes paint easily and holds it fast—no peeling, chipping or cracking.

A new "eyelet" method of fastening eliminates spot welds on the face and provides pre-punched nail holes. The rolled edged louvers give a massive appearance, and are designed to keep out snow and water, yet allow a free flow of air through the attic. Screened on back to keep out insects.

FULL CARTON CONTAINS 10 OF ONE SIZE

No. and Opening Size	Overall Size	Free Area	Each in Full Cartons	Each in Less Than Full Cartons

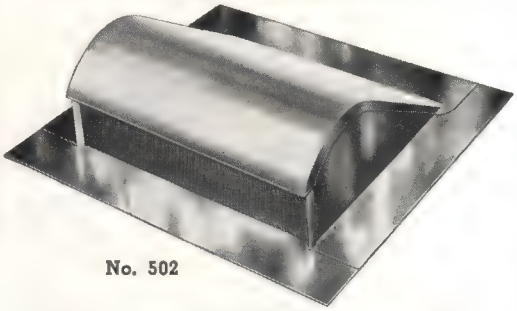
A NEW ROOF VENTILATOR

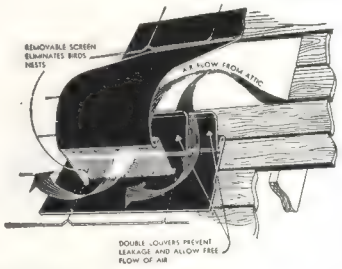


No. 502

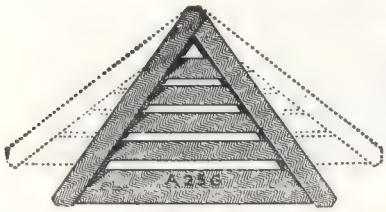
This is the finest Roof Ventilator ever offered—made of heavy rust-proof aluminum—rugged riveted construction—insect screen on front. Weather-tight louvered opening keeps out snow and rain yet allows free air flow. This smartly styled Roof Ventilator has ample free area (over 40 sq. in.). Used with any roofing. *Opening size*, 3" x 13¼". *Overall size*, 17¼ x 18¼".

No. 502, each.....$2.00★

Cutaway showing double louvers and outside screen.



VARI-PITCH LOUVER



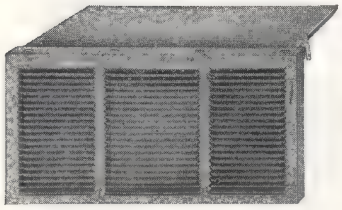
A-50A

Adjusts to any pitch of roof, from 30° to 55° instantly. All aluminum construction consisting of five weather-proof flanged louvers.

Approximately 75 sq. in. of ventilation.

A50A, each .....$4.19★

FOUNDATION VENTILATORS



Style MV

With damper to open in summer and close in winter.

Built of heavy gauge galvanized metal. Finned type louvers deflect water and provide a maximum of free area. Ventilator is screened in back to keep out insects.

MV and M are for use in masonry foundations, flange has mortar locks, fits 16" x 8" opening, installed the same time that blocks are laid.

Style MV is built with a Damper that can be opened during the summer and closed during the winter.

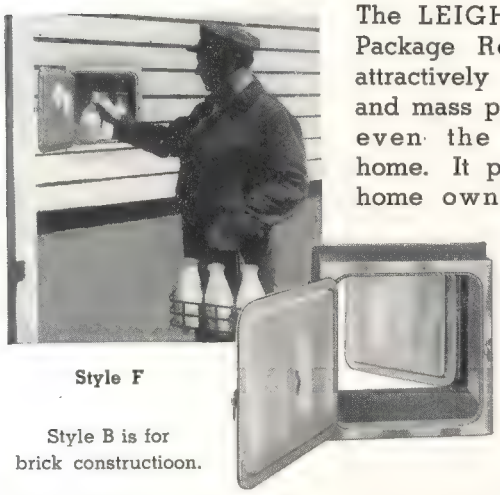
MILK AND PACKAGE RECEIVER



Style F

Style B is for brick constructioon.

The LEIGH Milk and Package Receiver is attractively designed and mass produced for even the low cost home. It provides the home owner a clean and sanitary place for deliveries of milk, packages, etc.

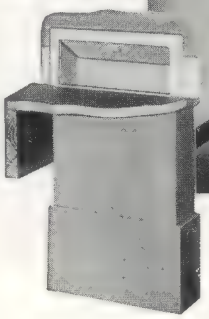
Made in two depths, for frame or brick construction—built of heavy gauge metal—with rugged hinges and locks. Double doors are filled with insulation to protect perishables in hot or cold weather. Installation flange acts as weather seal—spring clip holds instruction sheet for deliverymen—flush bottom makes cleaning easy. Finished in baked aluminum and packed one per carton.

Style F (for frame construction—6½" deep) ..... $7.76★
Style B (for brick construction—9½" deep) ..... 8.19★

DUST CHUTE

A unique answer to the housewife's problem of dirt and dust disposal—opening in the baseboard at floor level. A hinged door swings open with a touch of the foot, and stays open until closed. Dirt drops down chute into a removable dust bin in the basement. Dust bin slides off chute for periodical emptying.

LEIGH Dust Chutes are adaptable to old or new homes. Built of heavy gauge metal. The face is finished in gloss enamel and does not require painting. Housewives throughout the country say it's the greatest labor saver they have ever used. Packed one per container.



Sectional view shows unit installed.

Dust Chute ..... $6.06★

LEIGH ARISTOCRAT MAIL BOX

An outstanding new combination mail box and magazine receiver—all the beauty of hand wrought craftsmanship and priced for the economy home!

The Leigh ARISTOCRAT—an unusually attractive combination mail box. It enhances the doorway and entrance to a home—and it's so practical—two spacious compartments for both mail and magazines, newspapers, etc. It's production line produced—at an astonishing low price. Its watertight construction protects the mail in wet or windy weather. Built of heavy gauge rustproof aluminum—finished in a beautiful antique bronze. Packed in individual shipping containers—complete with installation screws.

Aristocrat Mail Box, each.....$3.68★

LEIGH BUILT-IN MAIL BOXES

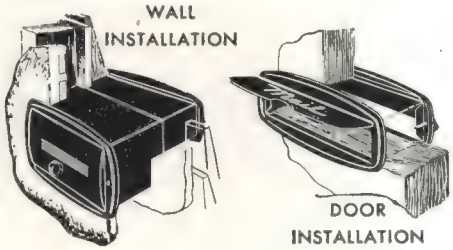
Truly high quality products—smartly styled to enhance any entrance. Made of heavy gauge stamped metal—will not crack or break—wind and rain-proof. LEIGH Built-In Mail Boxes cost less than the old style outside hanging mail box. Finish is dull brass baked enamel.

Made in two styles. DOOR Type unit consists of outside mail door and inside hood. Very easy to install. WALL Type consists of three parts—outside mail door, inside door and adjustable tin plate box. Box will hold several days' mail.

One complete unit packed in container.

Style D (Door Type), each.....$1.25★

Style W (Wall Type), each..... 2.69★



LEIGH CLOTHES CHUTE DOORS

Here is the finest Clothes Chute Door ever offered, smartly styled with round opening. The rolled edge eliminates the possibility of clothes or buttons catching in the opening. Door swings inward. Spring tension keeps door closed when not in use. Made of heavy gauge metal and finished in glistening white baked enamel. Lower in cost than wooden doors yet more attractive and will last longer.

Flanges on back make it easy to install. Nail or screw to chute or studding. No screws show to mar appearance of face.

One complete unit in corrugated container.

Size No. 12 (for opening 12" x 12"), each.....$3.12★

BRUCE FINISHED OAK FLOORING

Stocked at Oshkosh Only

Bruce Finished Flooring is genuine solid hardwood flooring, with all its familiar desirable qualities. In addition, this modern hardwood flooring gives you longer-lasting service and beauty, because of the superiority of its famous "Bruce-Way" finish which is applied at the factory.

Because Bruce Finished Flooring is completely finished at the factory it is ready to use as soon as laid, sparing you the mess and delay of sanding and finishing on the job. Installed by blind nailing, exactly like ordinary strip flooring, it is easy and economical to lay. Installation is rapid, too. No special tools or techniques required.

We can furnish from Memphis factory—
BRUCE PLANK FLOORING
BRUCE BLOCK FLOORING

Bruce Floor Finishing Products

At Oshkosh Only, we carry a complete stock of Bruce Floor Finishing Products. The dealer who sells the flooring is the logical dealer to sell all of the floor maintenance items.
